

Sport Tourism Economic Assessment Model (STEAM) Workbook

STEAM is a tool produced by the Canadian Sport Tourism Alliance (CSTA) designed to develop economic impact projections of sports events throughout Canada. Economic impact projections quantify the impact that special events have on the larger economy through a variety of measures such as GDP, Jobs, Wages & salaries, Taxes and Industry Output. Used judiciously, these indicators can be used to garner support from public and private sector partners, provide a framework for comparing the relative size of impacts of events, or for communicating to the general public the importance of sports events to the community as a whole.

Economic impact arises from three principal sources:

- ➤ Visitor Spending the spending of out of town participants, spectators, members of the media, VIPs and others who are coming to the community to watch or participate in the event. Note that the spending of local attendees is not included as it represents a transfer, rather than new money in the local economy.
- > Operations the spending of the organizers in running/producing the event
- Capital capital infrastructure or upgrades undertaken specifically as a result of hosting the event

It is very important for event organizers to understand that **STEAM** is **not** to be used as event budget software. It is software that **estimates** the economic impact of your event on the community. It will tell you the combined estimated total spending of participants, spectators and media who come to your event from **out of town** (>40km one way) and the overall economic activity your event generates in our community including employment, taxes and wages. It generates quantitative numbers that can be used by event organizers when approaching sponsors, city officials, etc. and evaluating the impact of their event over time. A sample of a sport tourism event report generated from STEAM is attached in Appendix C.

Please complete the form in its entirety and if you require clarification, please refer to the Appendices or contact the Sport Tourism Coordinator. Once you have completed the form, please send it to the Sport Tourism Coordinator for processing. Your STEAM results and report will be sent to you within 10 days of submission. Thank you for hosting your event in the City of Brampton and we look forward to welcoming your participants to our city.

Linda Olimer Coordinator, Sport Tourism 905.874.5938 linda.olimer@brampton.ca

14. Is any portion of participant expenditures being covered by the event organizers? (yes/no)		NA		
15. If yes, what percentage is being sponsored? (0-100%)	%	NA	%	%
16. What expenses are being covered? (Yes/No)				
Accommodation		NA		
Food & Beverage		NA		
Local Transportation		NA		

<u>Capital Expenditures</u> – include expenditures made by the organizing committee on construction or improvements to physical facilities in the areas of buildings and renovations, machinery and equipment, furniture and fixtures, transportation equipment, supplies and services. Capital expenditures to an economist refers to items that will last more than one year and are often referred to as "legacy items" left for others, post event. **NOTE – you may not have expenses in all or any categories, so put a zero in these line items**

Capital Expenditures	Dollars
Building and Renovations – additions and changes to the physical building	
Machinery and Equipment – something you can remove from the building without damaging it, e.g. zamboni	
Furniture and Fixtures	
Transportation Equipment – maintenance vehicles	
Other Supplies – landscaping, etc.	
Other Services – feasibility/environmental studies, etc.	
TOTAL	

Enter the % of construction costs that are attributed to local firms	%
Enter the % of construction costs that are attributed to local firms	%

<u>Operating Expenditures</u> – these are cash transactions made by the organizing committee; they do not include "value-in-kind", donations of goods and/or services. Value-in-kind is not traditional economic transactions and will overstate the economic impact of your event.

Every effort should be made to break the data down into its applicable areas. For example: a \$100K expense for ceremonies should be broken down as follows:

Wages paid to employees of organizing committee – (\$30k) – salaries, fees and commissions

Purchase of medals & awards – (\$10k) – other supplies

Catering of reception (\$50k) – other business services

Rent of facility (\$10k) - rent/lease

NOTE – if you do not have expenses in all categories, please put a zero in the applicable field.

Operating Expenditures	Dollars
Salaries, Fees and Commissions – wages of employees hired for the event	
Advertising Services – marketing and advertising to promote your event	
Professional Services – costs of consultants, architects, etc. hired for the event	
Financial Services – fees, commissions paid to accountants, bankers, etc.	
Insurance – costs associated with the event	
Rent/Lease – costs for renting or leasing office space, event venues	
Laundry and Cleaning Services – costs for laundry, cleaning or related services	
Other Services – other costs not accounted for i.e. security, sanitation, website, catering, trophies, gifts, ceremonies, uniforms	
Communication – phone, fax, courier, mail costs	
Energy and Other Utilities – utilities, probably N/A	
Guest Room Supplies – guest room supplies, probably N/A	
Office Supplies – costs to run the event office	
Kitchen Supplies – probably N/A	
Other Supplies – miscellaneous supplies	
Repairs – to equipment, venues	
Food and Beverages – Organizing Committee – food and beverage purchased for organizing committee or volunteers	
Food and Beverages – Participants – food and beverage purchased by the event organizers for participants	

Food and Beverages – Media/VIP – food and beverage purchased by the event	
organizers for Media/VIP	
Tymester to mean to	
Accommodation – Organizing Committee – costs of accommodations purchased for	
the organizing committee	
Accommodation – Participants – costs for accommodations purchased for sponsored	
participants	
Accommodation Madia //ID coats for accommodations numbered for an account	
Accommodation – Media/VIP – costs for accommodations purchased for sponsored	
media/VIP's	
Merchandise and Retail – costs of good purchased and resold by event organizers	
more name to and rectain to come or good pare naced and receive by event organizate	
Personal Travel – cost of travel undertaken by organizing committee only	
Transportation and Storage – transportation or storage costs e.g. shuttle bus service.	
Expenses paid for services rendered to the organizing committee only. Do not include	
commercial intercity transportation fares paid on behalf of participants	
dominioroidi interesty transportation rares paid on benair of participants	
Taxes - tax revenues that the event organizers pay directly to the government, e.g.	Dollars

APPENDIX A Key Definitions and Helpful Hints

Participants/Spectators/Media/VIP's – are defined in two ways; those that attend the event despite where they come from. The second definition refers to Unique Out of Town People which are defined as those travelling 40km or more, one way to the event. The STEAM model focuses on the Unique Out of Town (>40km one way) People (Participant/spectator/media/VIP's) that will have a higher likelihood of staying overnight for the sport event. Participants include athletes, coaches and officials).

Capital Expenditures – include expenditures made by the organizing committee on construction or improvements to physical facilities in the areas of buildings and renovations, machinery and equipment, furniture and fixtures, transportation equipment, supplies, services, feasibility/environmental studies, etc. Capital expenditures generally refers to items that will last more than one year and are often referred to as "legacy items" left for others, post event. NOTE: your event does not have to have capital expenditures in order to have an analysis conducted with the STEAM model.

Operating Expenditures – these are cash transactions made by the organizing committee; they do not include "value-in-kind (VIK)", donations of goods and/or services. Value-in-kind is not traditional economic transactions and will overstate the economic impact of your event, thus VIK expenditures must be excluded from the figures you enter here.

- Other Supplies include such items as awards, thank you gifts, etc.
- <u>Enter Taxes</u> any tax revenues that the event organizers pay directly to the government, e.g. ticket sales, merchandise, concessions. (This will not apply to most local sport organizations.)
- Total Revenue revenue must be equal or greater than your operating expenditures
- <u>Direct Employment</u> if you plan to hire someone to assist with your event, please complete this field. The number should be equivalent to that of a full time job (e.g. 2000 hrs = 1 full time). So if you hire someone for 500 hours, that would = approximately .25 of a job annually. Enter .25 in the field.

<u>Entering Expenditures</u> – every effort should be made to break your operational expenditures into the categories listed n pages 5 and 6. For example: a \$100K expense for ceremonies should be broken down as follows:

- Wages paid to employees of organizing committee (\$30k) salaries, fees and commissions
- Purchase of medals & awards (\$10k) other supplies
- o Catering of reception (\$50k) other business services
- Rent of facility (\$10k) rent/lease

NOTE - if you do not have expenses in all categories, please put a zero in the applicable field.

APPENDIX B Glossary of Terms

- <u>Initial Expenditure</u> this figure indicates the amount of initial expenditures or revenue used in the analysis. This heading indicates not only the total magnitude of the spending but also the region in which it was spent (thus establishing the "impact" region).
- <u>Direct Impact</u> relates ONLY to the impact on "front-line" businesses. These are businesses that initially receive the operating revenue or tourist expenditures for the project under analysis. From a business perspective, this impact is limited only to that particular business or group of businesses involved. From a tourist spending perspective, this can include all businesses such as hotels, restaurants, retail stores, transportation carriers, attraction facilities and so forth.
- <u>Indirect Impact</u> refers to the impacts resulting from all intermediate rounds of production in the supply of goods and services to industry sectors identified in the direct impact phase. An example of this would be the supply and production of bed sheets to a hotel.
- <u>Induced Impact</u> these impacts are generated as a result of spending by employees (in the form of consumer spending) and businesses (in the form of investments) that benefited either directly or indirectly from the initial expenditures under analysis. An example of induced consumer spending would be the impacts generated by hotel employees on typical consumer items such as groceries, shoes, cameras, etc. An example of induced business investment would be the impacts generated by the spending of retained earnings, attributable to the expenditures under analysis, on machinery and equipment.
- <u>Gross Domestic Product (GDP)</u> this figure represents the total value of production of goods and services in the economy resulting from the initial expenditure under analysis (valued at market prices)
- <u>Wages & Salaries</u> this figure represents the amount of wages and salaries generated by the initial expenditure. This information is broken down by the direct, indirect and induced impacts
- <u>Employment</u> figure represent the employment generated by the initial expenditures and includes both parttime and full-time work in ratios consistent with the specific industries.
- <u>Industry Output</u> these figures represent the direct and indirect and total impact (including induced impacts) on industry output generated by the initial tourism expenditure. It should be noted that the industry output measure represents the sum total of all economic activity that has taken place and consequently involve double counting on the part of the intermediate production phase. Since the GDP figure includes only the net total of all economic activity (i.e. considers on the value added), the industry output measure will always exceed or at least equal the value of GDP.
- <u>Taxes</u> these figures represent the amount of taxes contributed to municipal, provincial and federal levels of government relating to the project under analysis. This information is broken down by the direct, indirect and induced impacts.
- <u>Imports</u> these figures indicate the direct, indirect and induced final demand and intermediate production requirements for imports both outside the province and internationally.

APPENDIX C Sample STEAM Report

The combined total of visitor, capital, and operational spending as a result of hosting the event name is expected to total (Initial Expenditure) dollars. These expenditures will support a total of (Industry Output) dollars of economic activity in the province, of which (Industry Output) is expected to occur in the city name. The event name is expected to support wages and salaries of (Wages & Salaries) dollars and (Employment) jobs for host province, of which (Employment) jobs and (Wages & Salaries) dollars in wages and salaries will be supported in city name. The total net economic activity (GDP) supported by the event is expected to reach (GDP) for Canada as a whole, (GDP) for host province and (GDP) for city name.

Considerable tax revenues are also expected to be supported by *event name*, totaling (Taxes). The event will support *federal* taxes revenues of (Taxes), with an additional (Taxes) of taxes supported in *host province*. Additionally, the event name will support municipal taxes totaling (Taxes) across province name including (Taxes) in *city name*.

Disclaimer: The results of this pre-event economic impact analysis are intended to act as a guide and are not considered definitive of the actual events. All projections should be considered an event's potential economic impact. The projections are based on standardized spending estimates that may or may not reflect that of the highlighted event's attendees. In addition, the projections are based on the organizer's assumptions regarding attendance, composition and characteristics. These forecasts are subject to uncertainty and evolving events, therefore actual results may vary from forecasted results. Additionally, these forecasts only recognize the economic benefits of the event, and do consider any displacement or substitution costs that may occur as a result of hosting the event.
