

**NOTE:**

"SEEDBANK" IS THE HIGHEST QUALITY OF STRIPPED TOPSOIL. IT IS REQUIRED TO BE AMENDED WITH ORGANIC ADDITIVES AND/OR SAND TO MEET THE SPECIFIED SOIL COMPOSITION.

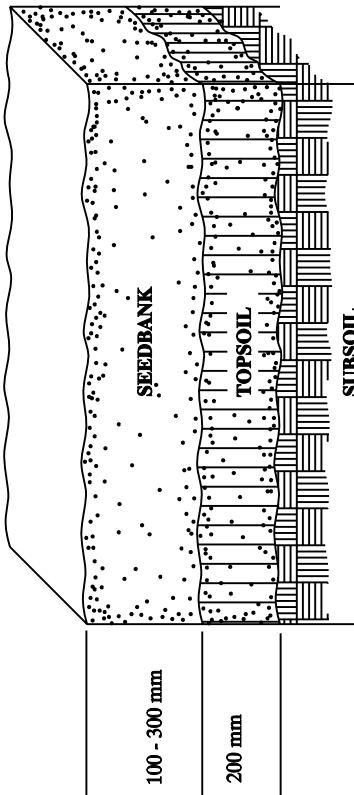

1. STRIP SEEDBANK AND TOPSOIL HORIZONS. THE SEEDBANK IS LIMITED TO THE TOP 100 - 300 mm. THE TOPSOIL MAY BE LIMITED TO THE SUBSEQUENT 200 mm. TEST PITS WILL DETERMINE THE HORIZON THICKNESS FOR EACH LAYER. GRUB STUMPS PRIOR TO STRIPPING SEEDBANK AND TOPSOIL.

2. STORE SEED BANK AND TOPSOIL IN SEPARATE PILES APPROXIMATELY 1000 - 1500 mm DEEP. AVOID COMPACTING THE SEEDBANK AND TOPSOIL PILES. IF POSSIBLE REMOVE AND SPREAD ON RECEIVING SITES IMMEDIATELY. STORE SEEDBANK MATERIAL AND TOPSOIL FOR LESS THAN 6 MONTHS AS BIOLOGICAL QUALITY DECREASES WITH TIME.

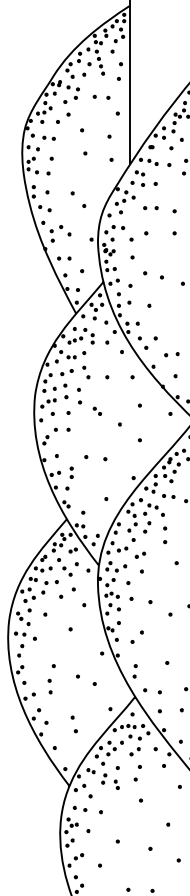

3. RE-APPLY TOPSOIL TO A DEPTH OF 150 mm. TOP DRESS AND FINE GRADE WITH SEEDBANK LAYER TO BETWEEN 30 AND 100 mm DEPTH.

4. STOCKPILE SITES MUST BE RESTORED TO A "RAKE CLEAN" CONDITION ACCEPTABLE TO THE CONSULTANT OR THE LANDSCAPE ARCHITECT. SURPLUS MATERIALS TO BE DISPOSED OF ON/OFF SITE AS DIRECTED BY THE LANDSCAPE ARCHITECT. OR THE CITY OF BRAMPTON.
