

**Date:** April 21, 2014

**COMMITTEE OF COUNCIL**

**File:** NO2

**DATE:** May 28, 2014

**Subject:** **RECOMMENDATION REPORT:**  
**“Brampton Grow Green” Environmental Master Plan**

**Contact:** Susan Jorgenson, Manager, Environmental Planning, Planning and Infrastructure Services (4-2054)

**OVERVIEW:**

- Further to direction from Council, staff has completed an Environmental Master Plan (EMP) to identify and prioritize programs and actions that can guide Brampton’s growth as a sustainable, healthy, and livable community.
- The Brampton Grow Green EMP study included a broad and comprehensive stakeholder consultation process, and was also integrated with the City’s recent Strategic Planning exercise. Consulting assistance was provided by Urban Strategies Inc. and Halsall Engineering.
- The EMP is organized into three components. The first two – Background Study and Green Paper – have previously been brought before Council. The third component is the Implementation Action Plan (IAP), which is being presented as part of this report.
- Staff is seeking Council’s approval of the Implementation Action Plan and the related Declaration, which will signal the conclusion of the EMP study and approval of “Brampton Grow Green” as the City’s Environmental Master Plan.

**RECOMMENDATIONS:**

1. **THAT** the report from the Chief Administrative Officer and the Executive Leadership Team, dated April 21, 2014 to the Committee of Council Meeting of May 28, 2014, re: **Recommendation Report: “Brampton Grow Green” Environmental Master Plan**, be received;
2. **THAT** “Brampton Grow Green” be approved as the City’s Environmental Master Plan (notwithstanding minor modifications/edits to the final EMP document as appropriate) to guide corporate and civic decision-making that will ensure Brampton develops as a sustainable, healthy, and livable community;

3. **THAT** the Declaration of Council in support of the Brampton Grow Green Environmental Master Plan, attached as Appendix A, be endorsed; and
4. **THAT** this report and Council's resolution be forwarded for information to Region of Peel, City of Mississauga, Town of Caledon, Toronto and Region Conservation, Credit Valley Conservation, Ministry of Municipal Affairs and Housing, Ministry of Natural Resources, and Ministry of Environment.

## **BACKGROUND:**

In 2008 Council directed staff to prepare an Environmental Master Plan (EMP), a framework for guiding the City's decisions and actions in the context of environmental sustainability. The Strategic Plan, Official Plan, EMP and Growth Management Program will function as an integrated community sustainability plan.

Brampton Grow Green delivers an environmental master plan that showcases the City's leadership: the EMP provides an environmental framework and monitoring tool to guide and support Brampton as a healthy and livable community, to ensure that matters of environmental sustainability are considered in decisions that affect both the corporation and the community-at-large, and an ongoing opportunity to educate and engage staff, stakeholders and conservation partners, and the broader community.

The Brampton Grow Green Environmental Master Plan is a compendium of three documents: Background Report (April 2012); Green Paper (April 2013); and Implementation Action Plan (2014).

### **EMP Background Report**

The *Background Report (April 2012)* presents a snapshot of Brampton's current environmental efforts, and includes:

- An explanation of the objective of the Environmental Master Plan;
- A description of the project methodology;
- Lessons learned from best practices related to environmental master planning;
- Highlights of key findings that establish Brampton as a distinct community;
- A comprehensive inventory of the City's environmental programs and actions;
- An identification of successes, areas of strength, and opportunities to enhance environmental performance; and
- A draft vision, guiding principles and goals for the EMP.

### **EMP Green Paper**

The *Green Paper (April 2013)* is the EMP's technical foundation, summarizing project process, vision, guiding principles, and implementation strategies, and includes:

- A description of the project process, consultation events and how the document is to be used;
- The final vision, guiding principles and goals for the EMP;
- A proposed Environmental Performance Framework (draft performance metrics, targets and actions); and
- Proposed corporate strategies to help implement the EMP.

The *EMP Background Report* and *EMP Green Paper* were presented to Committee of Council on May 27, 2013. Committee directed staff to use these documents to inform public consultation being coordinated through the Strategic Plan Community Engagement process. Feedback from five public open houses and an environmental stakeholder workshop has been incorporated into the *EMP Implementation Action Plan*.

## **CURRENT SITUATION:**

### **Implementation Action Plan (IAP)**

Building on the *Background Report* and *Green Paper*, the *Implementation Action Plan* (IAP) is intended to serve as the primary day-to-day tool for implementing the EMP.

At its heart, the IAP presents an Environmental Performance Framework that:

- itemizes “*Corporate*” and “*Community*” actions to improve the City’s environmental performance, associated with each of the EMPs six core goals (People, Air, Water, Land, Energy and Waste); and
- a set of *priority indicators, metrics and targets* to measure Brampton’s short and long term environmental sustainability performance.

The IAP also includes:

- a proposed *organizational structure* to manage implementation of the EMP actions;
- recognition of *collaboration and partnerships* between City departments, conservation agencies, community organizations, businesses, institutions and residents;
- A *monitoring and communications strategy* to continually promote and support the Plan; and
- A process for *ensuring the EMP remains current* and that it reflects the evolution of the City and changes in environmental priorities.

The full IAP document is provided in Appendix B.

## *Environmental Performance Framework*

As outlined in the Background Report, the EMP is organized around the six core goals of People, Air, Water, Land, Energy and Waste, grounded in the Brampton Grow Green vision:

*Brampton is a community that will conserve, enhance and balance our natural and built environments to create a healthy, sustainable city. We will carry out our responsibilities to meet the needs of the present community without compromising the ability of future generations to meet their own needs.*

To show progress towards achieving the EMP, each core goal includes priority indicators that describe what is being measured and why, related metrics to measure progress, baseline data from which progress will be measured and targets to reach in 2016 and in 2021.

The EMP Performance Framework has flexibility to add indicators and metrics that may track different data and targets that become more relevant as priorities or environmental conditions shift.

The IAP details actions for each core goal and its associated objectives, and explains their importance to the City. The actions for each core goal are further grouped according to environmental sustainability issues. A “Grow Green Action Table” (found in the IAP document, attached to this report as Appendix B) summarizes all the actions and ascribes the lead City department and potential partners (including other municipal departments, Region of Peel and/or conservation authorities) to support implementation.

While Brampton is now putting forward its inaugural Environmental Master Plan, it must be recognized that the City’s environmental progress has already been advancing. Over the course of developing the EMP, the City has carried on with work on new environmental initiatives focusing on developing sustainable communities, conserving natural heritage features and functions and naturalizing open space lands, expanding transit services, conserving energy and producing renewable energy, conserving water and managing stormwater, expanding environmental education and engaging the community, and managing solid wastes through recycling, etc.

The EMP Action Table (see Appendix B) has included initiatives that are underway and/or identified new actions that build on our current environmental progress.

## *Implementation*

Working towards and meeting the goals and objectives of the EMP is an on-going, long-term commitment by the City, conservation partners and the Brampton community. As a civic and corporate leader, the City will need to set a strong example that demonstrates commitment to improving environmental performance and work closely with our partners.

Throughout the EMP study process there has been ongoing consultation and communication within the Corporation, to ensure that there was an awareness and understanding of the objectives of the EMP, and of its importance to the City as a keystone of the “Preserving” (Environmental Stewardship) strategic priority.

As such, it is proposed that the City’s Senior Management Team will assume the role of a “corporate environmental leadership team” with the responsibility of overseeing implementation of EMP actions, and ensuring that there is progress reporting, including capital budget and departmental planning.

### *Collaboration and Partnerships*

The Region of Peel, Credit Valley Conservation and Toronto and Region Conservation Authority will direct environmental conservation (through agency mandates and legislated responsibilities) and also support Brampton’s environmental progress related to communications, education and stewardship (through collaboration and partnerships).

As noted above, the “Grow Green Action Table” identifies the leads and partners for each action.

### *Communications and monitoring*

Communicating the Brampton Grow Green vision, goals, actions and expectations, and engaging internal (corporate) and external (community) stakeholders to ensure comprehensive understanding is a strategic priority of the EMP. Specific EMP actions direct the development of corporate and community engagement strategies, communication plans and outreach programs.

In addition, a communications plan to support the release of the Environmental Master Plan, upon Council’s approval, will be prepared by staff.

Measuring EMP progress will rely on completion of baseline data collection and ongoing monitoring. Quantitative and qualitative tracking of environmental metrics will demonstrate how the City is progressing towards its environmental goals. Proposed tools to communicate EMP monitoring and progress include:

- Canvas of Environmental Initiatives: An annually updated ‘working list’ to reflect new environmentally sustainable initiatives and programs by the City and its partners.
- Annual Council Report summarizing what EMP actions were implemented over the preceding year, and direction for furthering EMP objectives over the next year.
- Sustainable Brampton Report: A “state of the environment” report prepared at approximately 5-year intervals, to provide a clear picture of environmental trends in Brampton as they relate to the EMP’s six core goals. The report will

track the City's progress on achieving short and long-term environmental goals and identify challenges.

The EMP itself will be reviewed every five years so that it remains current, relevant and reflective of the City's changing environmental goals and areas of focus.

## **CORPORATE IMPLICATIONS:**

Brampton Grow Green is a direct response to environmental sustainability for the City of Brampton as a corporation and a community. The IAP translates environmental objectives into attainable actions and measurable tasks and benchmarks for monitoring progress.

Brampton's fundamental aspiration is to build for the future within a long-term sustainable environmental framework, to address the needs and objectives of the City and of those who live, work and play within it. Brampton's commitment to, and leadership in environmental sustainability, will be expressed through the Council Declaration, attached as Appendix A.

### *Financial Implications:*

The implementation of the Environmental Master Plan will build on existing municipal and partner initiatives and programs. New actions identified in the IAP will require consideration in annual capital budget, resource and departmental planning, and will be discussed by Senior Management Team, in its capacity as the EMP oversight body.

## **STRATEGIC PLAN:**

The EMP supports the "Preserving" (Environmental Stewardship) priority of the Strategic Plan, and the strategic initiative to "Build a World-Class City that balances our Natural, Built and Cultural Environments". A specific tactic of the Strategic Plan is to finalize an EMP which will:

- Direct the conservation, restoration and enhancement of its urban, rural and natural environments; and
- Evaluate current environmental programs, initiatives and best practices, identify gaps in the City's sustainability efforts, and recommend areas for improvement.

The EMP further supports the Strategic Plan tactic to "Be an environmental leader..." by:

- Conducting corporate operations in an environmentally responsible manner;
- Promoting environmental awareness and keeping the public informed;
- Maximizing energy efficiency and water conservation in City buildings;
- Working with conservation partners on improvements to infrastructure and issues of climate change.

**CONCLUSION:**

The Brampton Grow Green Environmental Master Plan establishes an integrated approach to environmental sustainability. It will translate environmental goals and objectives into achievable actions and measurable targets.

The intent of the EMP has been to provide long-term sustainable framework that will address Brampton's vision to lead and educate in the preservation of its natural environment, and inspire future commitments, partnerships and investments. A key to developing the EMP has been broad stakeholder and public engagement that will facilitate sustainable decision-making across the corporation and with our conservation partners, and build awareness in the broader community.

Council's approval of the Implementation Action Plan will finalize the Brampton Grow Green Master Plan, and Council's approval of the Declaration announces Brampton's commitment to environmental sustainability.

Respectfully submitted,

**Brampton Grow Green Environmental Master Plan**

**Council Declaration:**

THAT the Mayor and Council proclaim that the City of Brampton will be a leader of environmental sustainability, as a corporation and a community;

THAT the City of Brampton recognizes environmental sustainability must be second nature in all areas of municipal responsibility, and part of the economic, social and cultural fabric of our community;

THAT the City of Brampton will define and manage a long term, environmental framework to guide the future planning, operations, education and care of our community;

THAT the City of Brampton will commit financial and human resources to improving the environmental performance of the corporation;

THAT the City of Brampton will promote a corporate and community culture of environmental responsibility;

THAT the City of Brampton will manage decision-making to respect and facilitate environmental objectives, goals and targets.

## Grow Green Executive Summary

### WHAT IS BRAMPTON GROW GREEN?

Brampton Grow Green is the City's first Environmental Master Plan – an environmental sustainability plan to understand what the City does well, to identify gaps and opportunities to change City operations and service delivery, and to establish sustainable directions, including policies, standards, actions and targets that will conserve and improve upon the environmental qualities of Brampton's built and natural landscapes.

The EMP is intended to act as a catalyst to engage, involve and support others in improving Brampton's environment and will most effectively be implemented as a collaborative effort. Businesses, industries, seniors, environmental groups, community associations, schools, families, professional organizations, students and all parts of the community have a role to play in helping to achieve Brampton's goals. Are you a partner yet?

The EMP is a living document that will grow and change with the City as its environmental profile and goals evolve in the future.

---

## What is included in Brampton Grow Green?

Brampton Grow Green is a family of documents including:

- **The Background Report (2012)** – provides a snapshot of Brampton today and contains a review of the environmental efforts of the City and its partners including policies, strategies / studies, programs and initiatives currently underway. It includes a review of best practices, a draft vision, guiding principles and goals.
- **The Green Paper (2013)** – is the technical foundation of the Environmental Master Plan. It includes a summary of the project process, vision, guiding principles, environmental metrics, priority actions and implementation strategies.
- **The Implementation Action Plan (2014)** – is an action-focused document containing the highlights of the Green Paper including priority environmental metrics and corporate strategies for the City of Brampton to take the lead in effecting environmental change
- **Technical Appendices** including:
  - Canvass of Initiatives
  - Consultation Summary
  - Environmental Performance Framework

---

## How does it link to the Strategic Plan?

The Strategic Plan – City-Building For Our Future, contains a vision and 5 strategic priorities based on the input of Brampton residents, business owners and other community stakeholders. These priorities and their related goals and initiatives will drive Brampton towards achieving its vision:

**Brampton is a world-class city of opportunity. We honour the past. We build on success. We plan for a future that thrives.**

One of the Plan's strategic priorities is "Preserving" which includes environmental stewardship and heritage preservation.

The Environmental Master Plan is included as a tactic to support the strategic initiative of building a world-class city that balances our natural, built and cultural environments.

Brampton Grow Green in combination with the City of Brampton Strategic Plan, Official Plan and Growth Management Program will outline an integrated approach to community sustainability, translating environmental goals and objectives into responsible, achievable, measurable and educational tasks, actions and benchmarks. As other 'master plans' for the City are prepared and / or updated (e.g. Transportation and Transit Master Plan Update 2014), they will need to have regard to Brampton Grow Green, particularly recognizing and refining targets and requirements for monitoring data.

## How will the EMP be used?

The Environmental Master Plan will be used by the City, its partners and residents as a tool to inform decision making by relating decisions to environmental sustainability, and to monitor success. The EMP will focus the 175+ environmental initiatives in the City today towards achieving progress that can be tracked over time. The EMP defines specific environmental goals and targets in each of the 6 core component areas (people, air, water, land, energy and waste) and outlines the actions and partnerships required to reach those goals and targets in the future.

## How can I be involved?

The City of Brampton will need your help to achieve the vision and goals of the Environmental Master Plan. Each of the 6 core components include actions for environmental progress that can be achieved within the Corporation of the City of Brampton and in the community at large. Your own choices: recycling, carpooling, taking transit, conserving water and energy, planting trees, can all help Brampton reach its environmental goals. Check out the Implementation Action Plan for more information.

# 1 Introduction

## Statement from Mayor Fennell

On behalf of Council, it gives me immense pleasure to present the City of Brampton's Environmental Master Plan.

Brampton is Flower City. We take immense pride in our beautiful parks, trails, lakes, beaches, and rivers. They are open, accessible and preserved for all to enjoy.

Our local environment brings residents together. It adds to our world-class city's unrivalled quality of life, and attracts people to invest, work, and live here in our diverse and thriving community.

This Environmental Master Plan builds on the mandate and goals of our Strategic Plan. Taken together, they will deliver real results for Brampton residents by ensuring our environment remains an unwavering priority for our city's future.

Sincerely,

**Susan Fennell**, Mayor  
April 2014

## Statement from CAO Corbet

Balance. It's what makes a community healthy. In Brampton, successful city-building is about balancing our natural, built and cultural environments. This balance affects our city's identity, pride, vitality and economic prosperity – now, and in the future.

Our Strategic Plan identifies environmental stewardship as one of our top priorities. "Brampton: Grow Green" is the City's very first Environmental Master Plan. It reinforces Brampton's position as an environmental leader, guiding initiatives among six components: air, land, water, energy, waste and people.

We want this plan to inspire commitments, partnerships and investments among stakeholders – from City operations and service delivery, to building construction and managing green spaces. Together, we will deliver responsible, achievable, educational and affordable environmental programs, activities and land use development.

Together, we are city-building.

**John Corbett**, Chief Administrative Officer

April 2014

## Role of the Implementation Action Plan

The Implementation Action Plan (IAP) together with the Background Report and the Green Paper, make up Brampton Grow Green, the City's first Environmental Master Plan. The Environmental Master Plan provides a framework for the City's environmental decision-making builds upon the City's ongoing environmental initiatives and provides an integrated approach to community sustainability, translating environmental goals into tangible tasks, actions, benchmarks and targets.

The Background Report (2012) forms the groundwork for the EMP and provides a snapshot of Brampton's current environmental efforts, City policies, programs and initiatives currently underway. The Green Paper (2013) provides the technical foundation of the Environmental Master Plan including a summary of the project process, vision, guiding principles, environmental metrics, priority actions and implementation strategies. A set of technical appendices is also part of the Grow Green family, providing detailed information on community consultation, the full list of Brampton's environmental initiatives and a comprehensive list of environmental indicators and related implementation actions known as the Environmental Performance Framework. The IAP is the final, implementation-focused

document of the Environmental Master Plan, crystallizing how the City, our partners and the Brampton community at large will move to achieve Brampton Grow Green's environmental objectives and targets. The IAP includes identification of (internal) corporate actions and (external) community actions for the City of Brampton and identifies priority metrics for measuring environmental performance in each of the core components of people, air, water, land, energy, and waste. The internal actions identify opportunities for the City to make corporate changes necessary to support the implementation of the EMP. The external actions identify the City's environmental partner's roles or opportunities to expand and develop new partnerships with agencies, organizations and the community at large. To provide clarity and maintain momentum, the actions are tied to leaders within the City and supportive partners within the community at large.

## 2 Grow Green Framework

The vision, guiding principles, core components and partnerships described in this section create a foundation to guide and structure the EMP.

### Vision

Brampton is a community that will conserve, enhance and balance our natural and built environments to create a healthy, sustainable city. We will carry out our responsibilities to meet the needs of the present community without compromising the ability of future generations to meet their own needs.

### Guiding Principles

#### Leadership

We will be innovative, lead by example, and advocate environmental sustainability within and beyond our community.

#### Accountability

We will be open in our decision-making and actions, and we will monitor, evaluate and report our environmental progress.

#### Responsibility

We will integrate community and natural systems sustainability into everything we do.

#### Stewardship

We will inform, educate, engage and participate with the community to protect, conserve and enhance our natural and built environments.

#### Balance

We will achieve our environmental goals within a balanced environmental, social, cultural and fiscal agenda.

#### Partnership

We recognize the need for, and value of, partnerships with other levels of government, conservation agencies, conservation groups, stakeholders and the community.

### Core Components

Six Core Components have been identified under which indicators, metrics, targets, actions and directions will be organized:

#### People

Invest in **PEOPLE** to create a healthy, livable and safe community.

#### Air

Reduce impacts on **AIR** quality.

#### Water

Protect and respect **WATER** as a non-renewable, life critical resource

#### Land

Manage **LAND** to sustain the natural environment.

#### Energy

Reduce **ENERGY** consumption and manage the impact of energy usage on our environment

#### Waste

Reduce **WASTE** generation to limit resource use, greenhouse gas emissions, preserve habitats and resource and decrease management costs

## Collaboration and Partnerships to Effect Change

The environment is a precious resource and at the heart of the quality of life that residents of Brampton enjoy. While Brampton can be proud of its many environmental initiatives, it must also recognize the need to align and strengthen current environmental programs and to improve environmental performance in its efforts of environmental stewardship. To achieve the vision of Brampton Grow Green and become more effective environmental stewards, Brampton must change the ways it does business and put environmental performance as a key consideration into its decision making process.

The EMP provides the framework to guide and support Brampton towards achieving its environmental goals both at the level of the City government and for the community at large. The EMP provides metrics, targets and actions that clearly show how to get started, where to make changes and who to partner with to ensure long term success.

To achieve the Grow Green vision, the City of Brampton will need to work collaboratively within and across its own departments and rely on the support and partnerships with conservation agencies, community-based organizations, local industry, businesses, schools, other levels of government and the public. The City's role with these partners will be as a leader, demonstrating progressive sustainability actions and standards in areas of municipal

jurisdiction, and as a facilitator, providing support and access to environmental resources for its many partners.

The City has a strong community of support to implement the EMP, and the leaders and partners identified in this IAP propose to strengthen these relationships and clearly share the responsibility for environmental change. Important partners include:

The **Province of Ontario** who are responsible for:

- Health • Education • Energy Systems • Natural Resources
- Provincial ministries and agencies apply legislation and regulations, policies, plans and programming that deliver services to residents and which direct the Region of Peel and City of Brampton, as corporations, land use planning authorities and service providers. In this regard, the Province:
- Directly funds health care, education and major provincial highways;
  - Regulates water quality (potable water, sewage, stormwater drainage, salt management); air quality; natural resources (aggregates, forest products, species at risk) and natural hazards.
  - Guides the growth of communities (Growth Plan) and land use development; the protection of agricultural lands (Greenbelt Plan), and the conservation of regional ecosystems (Greenbelt, Oak Ridges Moraine, Niagara Escarpment).

The **Region of Peel** who are responsible for:

• Waste Water • Water • Major Roads • Solid Waste • Public Health

The Region of Peel including Public Health apply policies, plans and programming that deliver services directly to residents, and which guide the development of Brampton, including the conservation of the natural heritage system and support its (remaining) agricultural lands. In this regard, the Region:

- Provides potable water and waste water (sewage) treatment, public health services, public housing, and the construction of major roads (Queen Street, Bovaird Drive) including a multi-use path network;
- Guides the growth of Brampton in respect of provincial/regional services and remaining agricultural lands, and the conservation of a Greenland System,
- Collaborates with the Conservation Authorities to secure significant natural heritage areas in public ownership, inventory natural areas, and address climate change impacts;

The **Conservation Authorities** (Toronto and Region Conservation and Credit Valley Conservation) have mandates for:

• Natural Hazards • Natural Heritage Systems  
Environmental Education • Conservation Lands  
Environmental Monitoring

The CVA and TRCA apply regulations, policies, plans and programming that deliver services directly to residents, protect natural hazards and natural heritage systems, and engage and educate the community including schools. In this regard, the Conservation Authorities:

- Regulate development and activities with floodplains, riverine and valley slope and erosion hazards, wetlands, and the Lake Ontario shoreline;
- Guide development to eliminate, minimize and mitigate impacts to natural features, functions and linkages, including terrestrial, aquatic and water systems;
- Develop and support science-based research, inventories and monitoring programs for natural heritage conservation, water management, adaptive management, cumulative impacts and ecosystems services;

- Collaborate with regional and area municipalities, school boards, NGOs and other levels of government to deliver environmental education and stewardship programs to residents, local businesses, community organizations and schools;
- Manage conservation lands for the protection, restoration and enhancement of natural hazards, and natural features and functions, and for passive public recreational and educational opportunities.

**Municipal environmental committees of Council** support the City's environmental stewardship efforts. In this regard, the Brampton Environmental Planning Advisory Committee (BEPAC) and Brampton Clean City Committee (BCCC) have mandates to provide community input into strategic planning studies and initiatives and can provide leadership and support for community programs, activities and events. Brampton Grow Green envisions that role of BEPAC and BCCC can be expanded to be an EMP community resource for education and outreach.

Lastly, the Federal Government establishes national priorities that influence the Provinces and municipalities, and that are reflected in a variety of funding programs (e.g. Gas Tax, Green Municipal Fund, etc.) that support municipal infrastructure development, environmental studies and initiatives, etc.

Brampton and these partners will need to work collaboratively to achieve mutual environmental goals through the delivery of their mandates and legislative responsibilities, and through educating, engaging and organizing community programs. While the IAP focuses on what the City of Brampton can do itself to improve its environmental performance, the environment transcends political borders and the City is committed to working with all levels of government and community partners to advance the goals of the IAP.

We all have a role to play in environmental stewardship and the actions contained in the IAP help define that role and make clear the long term environmental goals Brampton is working towards.

## 3 Getting There

Achieving the goals of the Environmental Master Plan will take place over many years and will be a long term commitment by the City, its partners and the Brampton community at large.

The City will need to set a strong example and foster corporate direction that is clearly tied and committed to improving environmental performance. The City's Senior Management Team will assume the role of a "corporate environmental leadership team". The Team will have responsibility for overseeing implementation of EMP actions, ensuring capital budget planning, progress reporting, and integrating the EMP across municipal departmental mandates, and through collaboration with environmental partners and the Brampton community at large.

The City will implement actions to modify the way it does business, communicates between departments, collects environmental data, makes decisions, manages its operations and updates its standards to contribute to achieving the goals of the EMP. The Corporate Actions outlined on the following pages will facilitate the City's implementation of the EMP's recommended actions. These Corporate actions focus on five key directions:

### 1 Municipal Sustainability Resources

#### **Define and assign municipal sustainability resources**

– the EMP must be embedded in the organizational configuration and composition of City departments and their associated divisions. A City department is typically responsible for specific tasks, goals and responsibilities relevant to its departmental mandate and function. The way the EMP is positioned within the City structure will influence collaboration between departments, promote corporate awareness of environmental initiatives and performance, and enhance public messaging about the priority of environmental sustainability within the City. The following municipal resources and actions, part of Brampton's organizational structure, will create changes that will help the EMP succeed in the long term.

- The Senior Management Team will lead/support Departments responsible for each action and facilitate interdepartmental collaboration.
- A Corporate Environmental Team (CET) will reflect the interdepartmental nature of EMP implementation to communicate, educate, monitor and report on the City's environmental performance.
- The Mandate of the CET is for the promotion, coordination and monitoring of the Corporate and Community Actions to achieve improvements to the City's environmental performance.
- The CET, with the support of an integrated divisional Grow Green Team, will operationalize the EMP actions including partnership collaboration.

## 2 Educate and promote awareness

**Educate and promote awareness within and beyond the Corporation.** Communication of environmental imperatives, goals, policies and actions within the Corporation as well as to the community, including residents, private corporations, non-profit organizations, stakeholders and other levels of government, will be an important element of the EMP's success. Internal and external education must focus on engaging stakeholders and building support to undertake environmental actions. The public and City staff must understand what it is they are expected to do, what supports are in place to assist them and what the benefits are expected from their actions. The following are actions for the City to expand awareness and educate the community at large and its partners about the EMP.

- Expand the role of the Brampton Environmental Planning Advisory Committee to act as EMP community resource for education and outreach.
- Expand the role of the Brampton Clean City Committee to act as EMP community resource for education and outreach.
- Establish a Sustainability Hub/Environmental Learning Centre to champion the environment to Brampton residents, business and stakeholders.
- Develop a Mandate for the Sustainability Hub for the promotion, coordination and monitoring of the Community Actions to achieve improvements to the City's environmental performance.
- Develop annual environmental awards/incentives for Businesses, Institutions and Citizens.
- Host an Environmental Summit in conjunction with the Brampton Environmental Planning Advisory Committee and Brampton Clean City Committee to share and learn best practices being implemented at home and abroad.
- Develop a comprehensive Grow Green Communication Strategy.

## 3 Performance monitoring

**Establish data collection and performance monitoring methods.** The impact of the EMP cannot be known without baseline data collection, ongoing monitoring and a refinement of the environmental performance framework and strategies over time to ensure effectiveness. Quantitative tracking of environmental metrics will demonstrate whether the City is making progress towards its environmental goals and provide powerful evidence to support additional environmental initiatives.

Performance benchmarking is a key element of the EMP and involves choosing metrics that matter (that are indicative of attributes that are important) to the city. Establishing performance targets for priority metrics and targets (based on a knowledge of current performance and precedents), and monitoring actual performance over time is necessary to evaluate Brampton's environmental performance. The following actions are required to establish the basis for a successful long-term monitoring of the City's environmental progress.

- Determine baseline data, and confirm and/or develop targets for all priority metrics.
- Identify departmental and corporate responsibilities for performance monitoring of Corporate and Community EMP Performance Targets, including data management and reporting.
- Establish protocols for data collection, analysis and reporting for each of the EMP Performance Targets.
- Engage a third party environmental auditor to review data collection, analysis and reporting protocols, and annual environmental performance results.
- Annually update the Canvas of Environmental Initiatives, a snapshot of current ways in which Brampton and its conservation partners are improving the City's environmental performance.
- Prepare a bi-annual Council report that describes the status of the implementation of the Environmental Master Plan.
- Prepare a Sustainable Brampton Report that describes and shares the status of the City's Corporate and Community environmental performance, issued at 5 year intervals.

## 4 Budgeting and decision making framework

### **Detail a budgeting and decision making framework.**

How Brampton budgets for and makes decisions about environmental initiatives and programs is key to the implementation of the EMP. Successful implementation of the EMP will require a commitment of resources, both capital and staff, and institutional resources. The decision-making framework of each City Department needs to closely consider the EMP's environmental framework, directions and priorities, as well as the environmental cost of its action and inactions. The EMP can open up access to external resources such as Provincial and Federal funding sources, staff internships, and partnerships. Providing such support to the EMP will assist with its long term success.

- Allocate a portion of the City's annual budget to implementation of the EMP, with an allocation of funds for municipal staff and funding for pilot projects.
- Initiate a True Cost Accounting approach to decision making in all City Departments. The environmental cost of options [GHG emissions; water pollution, etc.] and actions should be directly included in budgeting and reporting process.
- Tie budgets to environmental performance; projects that make a contribution to the environment should rank higher on the priority list.
- Develop a strategy to secure external funding opportunities and partners to help supplement the municipal resources and budget for environmental initiatives.

## 5 Municipal operations and procurement

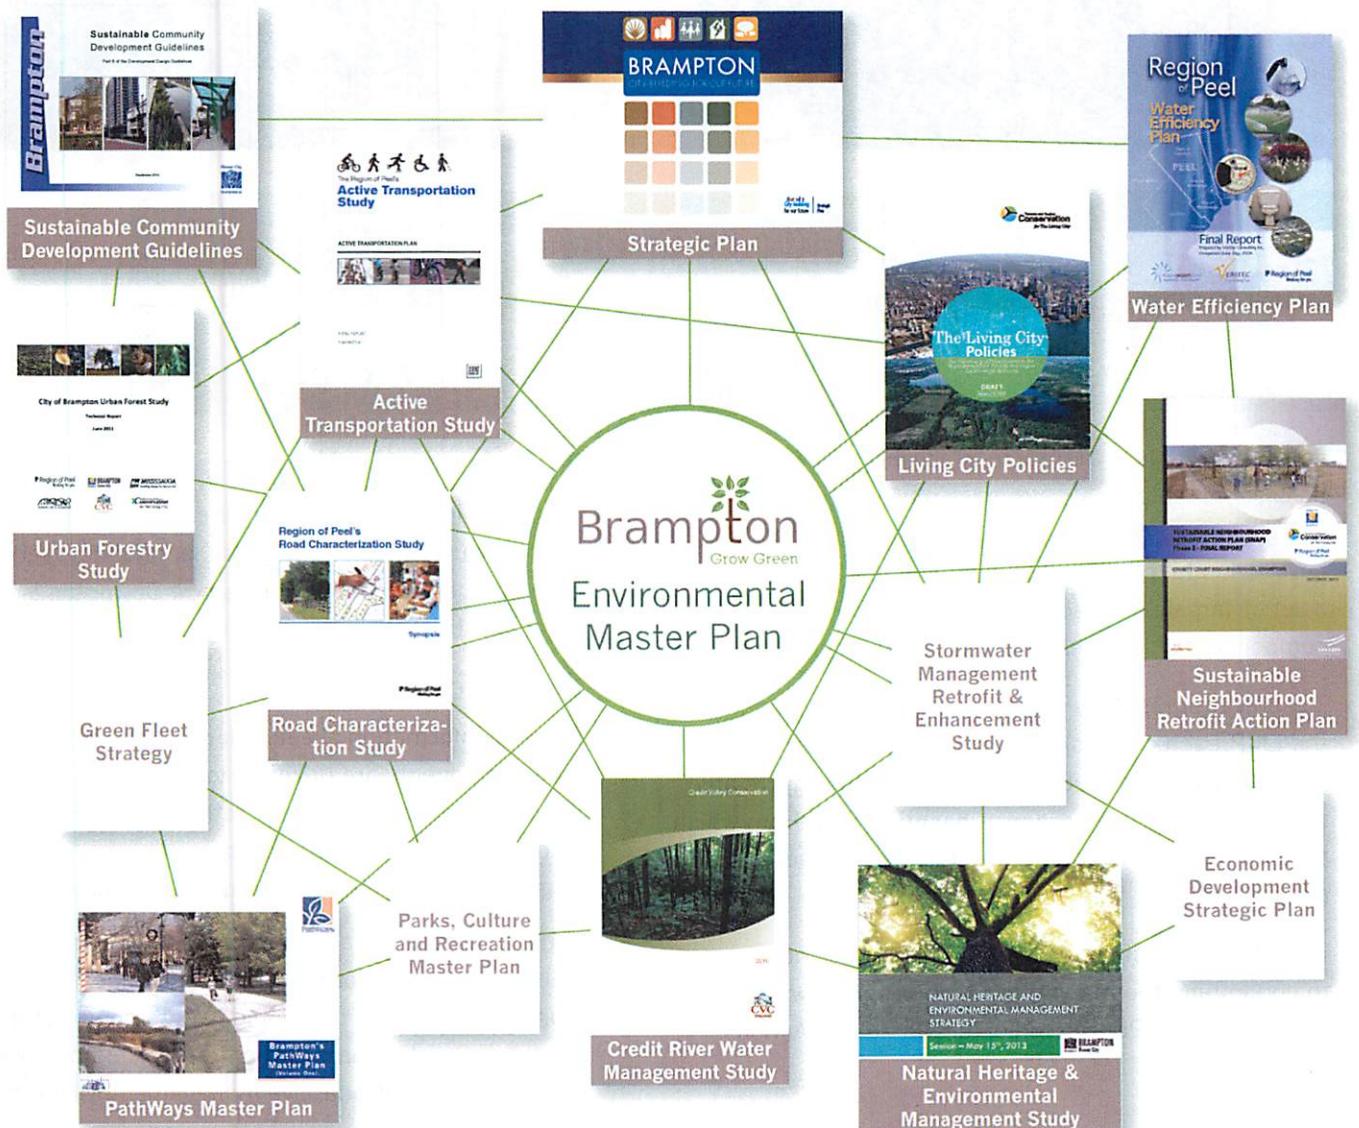

### **Manage municipal operations and procurement standards.**

Municipal procurement is defined as the acquisition of goods, services and works and can range from the purchasing of office supplies or the procurement of food, to funding complex, large-scale municipal contracts such as building a recreational facility. Through procurement practices, cities are becoming increasingly focused on how environmentally sustainable their contractors, suppliers and service providers offer services and manage their internal operations. The following actions describe how the City of Brampton can incorporate environmental practices into the planning and operation of Municipal facilities and services provided to the City.

- Develop a Sustainable Procurement Strategy.
- Follow the practices of the G.I.P.P.E.R.'s (Governments Incorporating Procurement Policies to Eliminate Refuse) Guide to Environmental Purchasing that provides recommendations and guidance to City staff at all levels for environmentally responsible procurement.
- Develop a code of sustainable qualifications that vendors/contractors are encouraged to meet when managing their operations or providing services to the City.
- Require contracts with professional service providers to demonstrate an internal municipal responsibility to sustainability and, through product delivery, how they are reducing environmental impacts.
- Develop an assessment protocol that evaluates the environmental consequences of an acquisition at various life cycle stages. Consider life cycle costing for products and demonstrate how they meet the City's environmental performance goals.

The City's EMP supports and builds on the intent of many other strategic City plans and studies, and is intended to bring cohesion to Brampton's many ongoing environmental initiatives, policies and programs from across all City departments, operations and services. Other City plans, in their updates or in their implementation, will need to reference the EMP, particularly recognizing targets, collection of monitoring data as appropriate and the actions that implement the Grow Green Plan. Cross referencing and supporting the EMP through the implementation of other plans will ensure that the goals and objectives of the EMP are entrenched in the City's policy making across its departments.

As described under Collaborations and Partnerships to Effect Change and illustrated via the Actions (Sec. 4.2), the EMP recognizes the integral relationship of Brampton's environmental goals and targets in the mandates, responsibilities and programs of our partners, the Province, the Region of Peel and the Conservation Authorities (Credit Valley Conservation and Toronto and Region Conservation). The EMP is not intended to direct our partners, but rather identify shared environmental interests and opportunities for collaboration and mutual support. The City of Brampton is responsible for implementing the EMP, and will work with its partners including individual departments to assist in achieving actions, and the consistent collection of data for monitoring purposes.

## 4 Achieving Environmental Performance

To measure Brampton's environmental progress overtime, the City has developed a set of targets, related metrics and actions in each of the six core components of Air, Water, Land, Energy, People and Waste.

To understand how Brampton is advancing towards its environmental goals, progress must be tracked using concrete measurements. To measure Brampton's environmental performance overtime, the City has developed a set of targets, related metrics and actions in the six core components of People, Air, Water, Land, Energy and Waste.

To show progress towards achieving the goals and vision of the EMP, each core component includes **priority indicators** that describe what is being measured and why, related **metrics** to measure progress, **baseline data** from which progress will be measured and **targets** to reach in 2016 and in 2021.

The following section includes two resources necessary to understand the manner in which progress will be monitored: the Priority Indicators Table and Actions.

### 1. Priority Indicators Table

This table includes the set of priority indicators (short and long term), metrics and targets identified through the Grow Green process that can express how Brampton is doing with regard to its goals in the six core components.

### 2. Actions

Detailed information sheets related to each of the core components are provided to list actions. Through the implementation of these actions, the City and the community will help make progress towards achieving the targets set out in the Priority Indicators Table.

Setting environmental targets and measuring progress is a still a new process for many municipalities. In developing a monitoring process, the municipality's choice of indicators, benchmarks, standards and criteria should be based on the principle of adaptive management, wherein new

information, science and monitoring information are fed back into the process to inform management programs and actions. The indicators selected should provide flexibility in measuring environmental performance at different scales; internal (corporate progress), how neighbourhoods are performing (the community at large), and how Brampton may compare to other municipalities.

The EMP Priority Indicators and Actions were identified through the Grow Green planning process and were based on: research of industrial standards and other municipality experience; expert advice from all City departments and environmental partners; and input from conservation agencies and community stakeholders. The metrics leverage, where possible, data already being collected or that can be easily collected by the City and partners.

Table 4.1 provides a list of 14 indicators (approx. 2 indicators for each EMP goal) that have been selected for the following reasons:

- Provides meaningful data that reflects Strategic Plan priorities and includes such targets as: corporate energy conservation, trees planted, natural heritage features conserved, etc. These indicators can be collected to assess City and Community progress on reaching the goal, and the Strategic Plan can report environmental performance on a city-wide level.
- Where feasible, similar metrics can be used to provide a meaningful understanding of City progress (corporate buildings, facilities, operations and services) and Community progress (all neighbourhoods across the city).
- Assesses short and long term effectiveness or performance of the City's environmental efforts:

**Short term** metrics build on existing baseline data and can report the annual accomplishment of actions. These metrics provide a snapshot of City or Community progress that can be easily understood, measured at a reasonable cost, and can be compiled without long delays.

**Long term** metrics generally provide data that reflects aggregated environmental performance (i.e. the success cannot be solely attributed to one particular project or service). This data can be used to provide a quantitative and qualitative assessment of environmental progress.

In moving forward, the Corporate Environmental Team will ensure that each department clearly understands their responsibility for data collection and how that data should be organized and maintained for monitoring purposes to be used annually, bi-annually and for the long term Sustainable Brampton Report. In reporting on environmental performance and progress, the City will ensure that the information provided related to the indicators, metrics and targets is easily understood and relates to tangible outcomes. Where appropriate, the data will be stated in absolutes and also will be extrapolated to reference information as percentages of the total population to ensure it remains relevant as the City grows. Further, the reporting will ensure to connect and describe the interrelationships between indicators including those listed for other EMP goals.

## 4.1 Priority Indicators

Core Component			Metric	Current Performance
<b>People</b> 	Short Term	Community	Number of Participants/year <i>Why use this Metric?</i> To monitor the number of participants (City staff or Brampton residents) in environmental initiatives and/or programs.	<b>2010 Data</b> <b>Youth</b> School Programs: 147,768 Stewardship Programs: 122,557 Summer Camps: 22,327
		City	Number of Participants/year	<b>2010 Data</b> Commissioner's Spring Challenge: 1,278
	Long Term	Community	Number of citizen outreach programs: Number of programs	<b>2010 Data</b> Over 40 community stewardship programs and activities
<b>Air</b> 	Short Term	Community	Tonnes eCO <sup>2</sup> per capita/year <i>Why use this Metric?</i> To monitor the reduction in green house gas (GHG) emissions.	<b>Based on Climate Change Strategy</b> City of Brampton (Population: 433,806) Measured in tonnes of CO <sub>2</sub> e
		City	Total tonnes eCO <sup>2</sup> /year	<b>Based on Climate Change Strategy:</b> <b>Table 4.1 Total Corporate Emissions of CO<sub>2</sub>, for 2010</b> Source Type: CO <sub>2</sub>
	Long Term	Community	Number of transit trips per capita/year <i>Why use this Metric?</i> To measure the total number of transit trips taken in the year divided by the City's population.	<b>2010 Data</b> 27.2 trips/resident
		Community	Transportation: Vehicle kilometres travelled (VKT)/capita/day	<b>2006 data</b> 25.8 km/per person/day

Current Performance	Target Performance		
	2014	2016	2021 (every 5 years)
<b>Business</b> Partners in Project Green: TBD <b>Community</b> Clean City Activities: 393,000 Tree Planting: TBD CVC: 2,583	Begin Tracking	25% Increase from baseline	25% Increase from 2016
	Begin Tracking	25% Increase from baseline	25% Increase from 2016

	(16 ha/year)	20 ha/year	25 ha/year

## 4.1 Priority Indicators

Core Component			Metric	Current Performance
<b>Energy</b> 	Short Term	Community	Building energy intensity by sector (lowrise residential, multi-unit residential, office): equivalent megawatt-hours/capita (per person of the total City population)  <i>Why use this Metric?</i> To measure the energy intensity of buildings, including energy utilized for heating, cooling, lighting and appliance/machinery use. Building energy intensity is the ratio of total building energy use to total building floor area.	<b>Based on Climate Change Strategy:</b> Natural Gas–2006 Residential: 314,993,942 Commercial: 153,611,164 Industry: 198,283,325 <b>Total: 666,888,432</b>
		City	Building energy intensity: equivalent kilowatt-hours/m <sup>2</sup> of floor area (ekWh/ m <sup>2</sup> )	<b>2010 Data</b> Corporate: 223 ekWh/m <sup>2</sup> Works: 327 ekWh/m <sup>2</sup> Recreation: 410 ekWh/m <sup>2</sup>
	Long Term	Community	Energy supply coming from on-site renewable resources: % of energy coming from on-site renewables	<b>2010 data</b> .15%
<b>Waste</b> 	Short Term	Community	Waste diversion rate (percent diverted from landfill/year)  <i>Why use this Metric?</i> To measure the annual waste diversion rate, or the percentage of total materials diverted from landfill through recycling, reuse and composting.	<b>2008 Data</b> Region of Peel: 49.8% diversion - need to determine Brampton specific rate
		City	Waste diversion rate (percent diverted from landfill/year)	<b>(To align with 2010 data)</b> Determine Baseline

Current Performance		Target Performance		
		2014	2016	2021 (every 5 years)
<b>Hydro-2006</b> Residential: 1,102,306,661 Commercial and Institutional: 329,635,749 Industrial: 2,407,366,267 <b>2006 Brampton Census:</b> 433,806		Track and determine baseline	10% decrease from baseline	30% decrease from baseline
	Parks: 410 ekWh/m <sup>2</sup> Transit: 576 ekWh/m <sup>2</sup> Fire: 300 ekWh/m <sup>2</sup>	(5% reduction from 2008)	15% decrease from baseline	30% decrease from baseline
		<ul style="list-style-type: none"> <li>• Continue tracking on-site renewable energy supply</li> <li>• Determine baseline</li> </ul>	0.5 W/cap: 200kW	1 W/cap: 500kW
		Track and determine baseline	70% diverted from baseline	90% diverted from baseline
		Track and determine baseline	80% reduction from baseline	100% reduction from baseline

## 4.2 Actions

### People

**Goal:** Invest in PEOPLE to create a healthy, livable and safe community.

#### Why is this important?

People are a fundamental element of the earth and its natural systems. To survive and thrive, humans need productive land, clean water and air, and abundant energy. However, by our very nature and daily activities as we live, work and play, we consume resources, generate waste and cause impacts to local air, water and land resources. As stewards of the environment, we need to reduce our resource consumption and waste, and manage our local environments in a manner that improves local air and water quality while supporting and enhancing local biodiversity.

Brampton's EMP objectives involve empowering residents and businesses to live active and healthy lifestyles, to embrace a culture of conservation and to establish a green economy. To move down this path the City will need to engage residents and businesses to participate in stewardship projects in their local neighbourhoods and front yards, to conserve water and energy, and reduce waste. EMP actions to accomplish these objectives include education and awareness programs, fostering partnerships with a diverse range of community champions, and reporting on environmental progress.

#### Education and Awareness

Brampton has a diverse community, and therefore, education and stewardship programs need to reach a wide audience. Corporate operations and community programs need to inspire long-lasting environmental activity and political and social will; demonstrate environmental progress within a practical timeline; and illustrate the positive effects that individual, community and corporate decisions and actions have on achieving the environmental goals of the community.

**P 1** Develop a corporate Grow Green Engagement Strategy to promote the EMP goals of air, water, land, energy and waste.

**P 1.1** Develop awareness and education materials for each component that includes a comprehensive website such as a data base of environmental resources, services, activities, calendar of events, etc.

**P 1.2** Develop a staff participation baseline and engagement tactics to increase staff participation (i.e. require staff participation in at least one environmental event per year).

**P 1.3** Develop a Grow Green Recognition Program to celebrate the City's environmental leaders (staff, department) and programs.

**P 1.4** Utilize technology and establish smart approaches to access and share environmental data, information and successes between City departments.

**P 2** Develop a Community Grow Green Campaign to promote the EMP framework and actions and to celebrate successes.

**P 2.1** Inform Council and the community of the implementation and success of Brampton Grow Green through a variety of communication materials, e.g. annual updates, reports to Council and 'state of the environment' reports.

**P 2.2** Develop an annual Grow Green city-wide event.

**P 2.3** Develop a Grow Green Recognition Program to celebrate the City's environmental leaders including conservation partners, residents, businesses, NGOs, etc.

**P 3** Develop a Community Grow Green Awareness and Engagement Strategy.

**P 3.1** Develop a series of awareness and education campaigns (graphic information brochures) for each of the EMP core components.

**P 3.2** Develop and maintain a community participation baseline and database.

**P 3.3** Develop and maintain an inventory of Community Environmental Programs.

**P 3.4** Develop a comprehensive website that includes a database of environmental resources, services, activities and events.

- P 3.5** Continue to expand Brampton's Environmental Education Program to support the needs of a wide range of learners in a community-based agenda that:
- Improves the outcomes of schools and communities that receive environmental education and services;
  - Increases the capacity for schools and communities to meet the educational needs of a variety of learners in settings ranging from interactive programming in regular and self-contained classrooms, outdoor classrooms and in community-based locations (i.e. recreation and community centres);
  - Ensures that environmental education and programming are linked to the Ontario Curriculum;
  - Improves the balance between a focus on teaching and learning, and the need for appropriate process and accountability; and
  - Closes all environmental education gaps.

## Expand Partnerships

Building partnerships with existing environmental stewards and agencies and establishing new partnership opportunities with businesses, institutions, and the community will be key to the implementation and achieving the goals of the EMP.

### **P 4** Develop and implement a community Grow Green Partnership Strategy

- P 4.1** Support school boards (Peel District, Dufferin-Peel Catholic District, Brampton Private, Alternative and Independent boards) to implement and complete the Ontario Eco Schools Certification Program.
- P 4.2** Establish a Grow Green Network and events for environmental NGO's and community groups, businesses and faith groups.
- P 4.3** Establish a database of priority community Grow Green projects that is accessible by community Grow Green Network.
- P 4.4** Establish and maintain a green business database.

**P 5** Expand partnership opportunities with the Region of Peel and Conservation Authorities to engage residents in EMP actions.

**P 6** Develop Brampton specific baselines and performance targets for community participation and citizen outreach programs including municipal environmental programs, and engagement and stewardship programs of the Region of Peel, Conservation Authorities including Partners in Project Green, schools, etc.

**P 7** Develop research partnerships with other levels of government, conservation agencies, post-secondary institutions, etc. to assist in monitoring of Brampton's environmental performance and the health of its built and natural communities.

**P 7.1** Work with Peel Public Health to assist with the measurement of long term health indicators.

**P 8** Seek partnership opportunities with other municipalities and conservation organizations to further the City's EMP.

**P 8.1** Continue to work with Vaughan and Richmond Hill to expand opportunities associated with Sustainable Community Development Guidelines.

**P 8.2** Continue to participate in interregional partnerships such as the GTA Clean Air Partnership, Peel Climate Change Strategy, Peel Air Quality Management, Peel Urban Forestry Working Group, etc.

**P 8.3** Develop cross-jurisdictional partnerships with adjacent municipalities and conservation authorities that focus on watershed, landscape and local sustainability initiatives and public education.

# Air

**Goal:** Reduce impacts on AIR quality.

## Why is this important?

Clean air is fundamental to life. Air pollution impacts human health and damages ecosystems. Poor air quality in cities contributes to respiratory diseases, including increased levels of asthma, particularly amongst children and the elderly. Poor air quality has many sources from traffic congestion to energy consumed for heating and cooling buildings. As Brampton and the GTA grow, the levels of air contaminants are expected to rise and health risks will increase.

Climate change is any change in climate over time, whether due to natural changes or as a result of human activity. For Brampton, this means warmer winters and hotter summers, with more frequent and extreme weather events, that will threaten the City's infrastructure and natural heritage system. This shift in climate conditions in Brampton will have an effect on the economy, our communities, and Brampton's natural and urban landscapes.

Brampton's Grow Green air objectives and actions relate to decreasing greenhouse gas emissions, promoting active transportation and transit-oriented communities, enhancing natural areas and the urban forest, and partnering with the Region of Peel to monitor and raise awareness about Brampton's air quality.

## GHG Emissions Reductions

The measurement of greenhouse gas emissions (GHG) is a widely used measurement of some of the key contributors to climate change. Brampton's GHG emissions result from the operation of buildings and facilities, transportation, industry, agriculture, and waste and waste facilities. The City of Brampton will respond to climate change by reducing GHG emissions (mitigation) and/or by adaptation to its impacts.

### A 1 Develop a Corporate GHG Emissions Reduction Strategy.

- A 1.1 Finalize a corporate Greenhouse Gas (GHG) emissions inventory and establish short, medium and long term reduction targets.
- A 1.2 Develop GHG Emissions Reduction Plan for City buildings and facilities, including sports fields.
- A 1.3 Develop GHG Emissions Reduction Plan for corporate fleet, including Transit and small equipment.
- A 1.4 Develop GHG Emissions Reduction Plan for street lighting.
- A 1.5 Establish a protocol for annual monitoring and reporting of corporate GHG emissions.

### A 2 Develop a Community Greenhouse Gas Reduction Strategy with Peel Climate Change Strategy partners.

- A 2.1 Finalize a community Greenhouse Gas (GHG) emission inventory and establish short, medium and long term reduction targets.
- A 2.2 Establish a protocol for monitoring and reporting community GHG emissions.
- A 2.3 Develop and promote a GHG Emissions Reduction Plan and tactics for buildings.
- A 2.4 Develop and promote a GHG Emissions Reduction Plan and tactics for mobile GHG emission sources.

### A 3 Work with the PCCS partners to develop and implement a comprehensive Community Education Strategy designed to encourage community GHG reductions and potential savings of energy efficient appliances and retrofits.

- A 3.1 Expand 'Earth Hour' program to help residents to easily make changes to reduce energy use).
- A 3.2 Expand and develop new municipal and partnership communications programs (e.g. Let Your Green Show campaign, Partner in Project Green energy audits, etc.) to engage residents and businesses in energy consumption, reduction and renewable energy.

## Transportation Management

Vehicle emissions contribute to air and water pollution. Road infrastructure including parking lots contribute to stormwater runoff, heat island effect and occupy land that could be used as green or living space. Reducing automobile use, improving regional transportation systems and local transit networks, expanding travel demand management programs (e.g. Smart Commute Brampton-Caledon) and encouraging active transportation such as cycling and walking will promote healthy lifestyles while improving Brampton's air quality and reducing its GHG emissions. These measures will also mitigate negative impacts on water and preserve land area.

---

**A 4** Work with the Province, Metrolinx, Region of Peel and area municipalities to improve the local transportation system including local and regional transit networks, GO rail service, travel demand management measures and programs, higher order vehicle (HOV) lanes, etc.

A 4.1 Coordinate funding programs and opportunities to maximize local and regional priorities.

A 4.2 Implement the Hurontario-Main Street Light Rail Transit (LRT) project.

A 4.3 Develop a Transit Education and Awareness Campaign targeted at Brampton youth and adults about the economic, social and environmental benefits of using transit.

---

**A 5** Update and implement the City's Transportation Master Plan

A 5.1 Prioritize transit uses on roads including transit traffic light control and reserved lanes.

A 5.2 Implement higher order vehicle (HOV) lanes on heavily traveled roads or roads with frequent transit service.

A 5.3 Expand Brampton's Züm Bus Rapid Transit program (BRT) service.

A 5.4 Establish a baseline of transit trips per year and develop a monitoring protocol.

A 5.5 Establish a baseline of vehicle kilometres travelled per year and reduction targets and develop a monitoring protocol.

A 5.6 Establish a database of city-wide capital projects (SWMP retrofits, naturalization projects) to be integrated with Road EA projects and the Road Repaving program.

---

**A 6** Work with stakeholders and agencies to develop a Community Engagement and Education Campaign about transportation including the impact of automobile use on air quality and the environment and the costs savings associated with car-sharing and transit use

A 6.1 Further promote the Smart Commute Transit Pass Program.

---

**A 7** Work with Smart Commute Brampton-Caledon to develop a Corporate Movement Strategy that promotes alternative transportation options for City employees to commute to work and accessing work locations during the business day.

A 7.1 Develop a promotional campaign to inform employees about their option to receive discounted transit passes for commuting to work.

A 7.2 Communicate Flexible Work Hour and Work Week options as a way for employees to improve Brampton's air quality and reduce GHG emissions.

A 7.3 Reduce single occupant car travel through free transit passes, carpooling to meetings/conferences, teleconferences, employee bike program (i.e. bikes for bylaw officers, mail delivery, BIXI, etc.).

---

**A 8** Establish a Cycling Advisory Committee and invest in cycling infrastructure (through planning, engineering, enforcement, education and evaluation) to become a Bicycle Friendly Community.

A 8.1 Building on the City's Pathways Master Plan, develop and implement a Pedestrian and Cycling Master Plan.

A 8.2 Establish bike-friendly design requirements and bike infrastructure standards at municipal buildings, public spaces, parks and transit stops.

A 8.3 Establish bike-friendly design requirements and bike parking standards for public, private and institutional facilities, including updating Secondary Plan Policies, site plan requirements and applicable zoning bylaws.

- A 8.4 Co-ordinate with the Region of Peel to implement the Peel Active Transportation Plan.
  - A 8.5 Develop a Communication Plan to promote Active Transportation to residents.
- 

- A 9 Work with school boards and Peel to encourage 'walking school buses' in neighbourhoods and the use of transit for older children.
- 

## Air Quality

Environment Canada reports that emissions associated with vehicles are the largest source of nitrogen oxide and the third largest sources of volatile organic compounds (VOC). Understanding and communicating the sources of pollution is a key action in the City's efforts to improve Brampton's air quality.

---

- A 10 Continue to work with the Peel Regional Air Quality Working Group (Public Health) and municipal and CA partners.

- A 10.1 Develop a Community Air Quality Awareness Campaign to educate the community about Brampton's air quality, including the important sources of air pollution and its human health impacts.

- A 10.2 Work with the Province and Region of Peel to establish Brampton air quality monitoring stations.

- A 10.3 Work with Peel to identify local areas of air quality concern and develop a local action plan to address sources of pollution

---

- A 11 Work with the Region of Peel to develop a Brampton-specific Smog Alert campaign.
- 

- A 12 Work with the Greater Toronto Area Clean Air Council to promote, educate and coordinate regional clean air initiatives.
- 

- A 13 Implement the City's Anti – Idling Bylaw.

- A 13.1 Develop and implement a city-wide Idling Awareness Campaign to educate residents on the economic and environmental impacts of idling cars.

- A 13.2 Develop and implement a Targeted Enforcement Plan a idling hot spots

---

# Water

**Goal:** Protect and respect WATER as a non-renewable, life critical resource

## Why is this important?

Access to clean potable water needs to be recognized as a limited resource. New integrated water management approaches that encompass the economic, social and environmental benefits of water conservation and water quality protection are critical to address this vital resource. Brampton's water objectives and related actions relate to managing water resources through:

1. Potable Water Conservation – reducing consumption and encouraging wise use of potable water.
2. Water Resource Management – protecting and enhancing Brampton's watersheds to improve water quality.
3. Stormwater Management – increasing the use of captured or recycled site water and reducing and managing stormwater runoff.

## Potable Water Conservation

We depend on clean water for drinking, household and commercial uses, a healthy natural environment, recreation, sewage treatment and many other functions. The Region of Peel is responsible for treating and distributing Brampton's potable water supply, which is drawn from the Lake Ontario.

**WT 1** Develop Official Plan policies to promote urban development forms and buildings that support reduced water consumption.

**WT 1.1** Develop policies and standards requiring new development applications to submit a Water Conservation Plan that details proposed water reduction targets, tactics and water saving devices.

**WT 2** Work with Region of Peel to review communications material to draw attention to the value of water and its conservation.

**WT 2.1** Work with Peel to develop Brampton specific potable water use baseline and reduction targets.

**WT 3** Work with Region of Peel to expand current education about potable water demand and use including the impact of water use on watershed resources, cost of treating and distributing water, current lawn watering regulations and the use of potable water for swimming pools, etc.

**WT 3.1** Develop and distribute public information on water efficiency.

**WT 3.2** Support the Region's Fusion Landscaping Program to encourage the planting of native species to reduce watering requirements for residents and ICI.

**WT 4** Work with Region of Peel and Conservation Authorities to promote the Region's ICI Indoor Water Efficiency Program to educate and assist ICI customers on how to reduce their consumption.

**WT 5** Support Peel to systematically reduce leakage in the water distribution systems.

**WT 6** Work with Peel Climate Change Strategy (PCCS) partners to develop an Infrastructure Risk Management Assessment and Renewal Strategy to address climate change adaptation.

**WT 7** Develop a Low Impact Development (LID) Strategy, standards and practices that address stormwater management with consideration for snow melt/ rainfall resource use, and property irrigation.

**WT 7.1** Develop a plan to install water conserving technology and/or retrofit low-flow fixtures in new and existing City facilities.

**WT 7.2** Pilot grey water systems in municipal buildings and facilities (e.g. composting toilets; on-site treatment in public buildings).

**WT 7.3** Implement wastewater demonstration projects in municipal buildings and facilities (e.g. LID, greywater recycling, green roofs).

---

**WT 8** Develop a Water Conservation Plan for City indoor recreation facilities.

**WT 8.1** Collect and reuse swimming pool water to irrigate local parkland and sports fields, as appropriate.

---

**WT 9** Develop a Water Conservation Plan for City outdoor recreational facilities, sports fields and landscaped areas.

**WT 9.1** Install computerized central controls for conservation on parks and open space irrigation systems.

**WT 9.2** Develop a rain water capture program, including cost savings and removing restrictions on rain-barrel installation.

---

## Water Resource Management

Management and improvement of water resources begins at the watershed scale. A watershed is an area of land including its inhabitants and communities, agricultural, open space and natural areas that are connected by water draining to a common stream or river. Brampton consists of five major subwatersheds, Credit River, Fletcher's Creek, Etobicoke Creek, Mimico Creek, and West Humber River. In Brampton, rainwater and snowmelt should be managed as a resource not a management impact. This section outlines actions related to protecting, restoring and enhancing natural heritage features, such wetlands, lakes, rivers and streams, open spaces and parkland and green infrastructure to ensure clean water reaches groundwater and surface water features and eventually Lake Ontario.

---

**WT 10** Undertake and update subwatershed studies with the Province, Region of Peel, Conservation Authorities, conservation agencies and community groups.

**WT 10.1** Implement subwatershed recommendations in all new development plans including developing urban Master Environmental Servicing Plans for areas of redevelopment and intensification.

**WT 10.2** Collaborate with TRCA's Humber Watershed Alliance and Etobicoke-Mimico Creek Coalition to implement subwatershed recommendations to maintain, restore and enhance subwatershed health and identify new initiatives to improve watershed biodiversity and connectivity.

**WT 10.3** Collaborate with CVC to implement subwatershed recommendations through municipal and CA environmental education, restoration and stewardship programs, e.g. SNAP neighbourhood retrofits.

---

**WT 11** Develop and implement a comprehensive Channel Remediation and Stream Restoration Strategy in conjunction with the Province, Region of Peel, Conservation Authorities and conservation agencies (e.g. Ontario Streams).

**WT 11.1** Implement the recommendations of the Peel Channels Remediation Study, including a cost-benefit analysis, and the pilot projects identified for Spring Creek.

**WT 11.2** Develop a Funding Strategy to implement the Channel Remediation and Stream Restoration Strategy.

**WT 11.3** Establish a baseline and targets for channel remediation and stream restoration works.

---

**WT 12** Support the Conservation Authorities ongoing Watershed Monitoring programs.

**WT 12.1** Work with Conservation Authorities to develop an Education and Awareness campaign about the water quality impacts of stormwater runoff from private properties including issues from fertilizers, pesticides, car washing, pets, swimming pool care, etc.

**WT 12.2** Collaborate with other levels of government, research institutions, conservation organizations, etc. to undertake monitoring efforts that support watershed monitoring.

---

**WT 13** Update the Lake Management Strategy 2005 including recommendations for conservation and management that have regard to watershed plans, etc.

**WT 13.1** Implement the recommendations of the updated Lake Management Strategy through municipal programs and activities and the development of partnerships with the Province, Region of Peel, Conservation Authorities and local community groups.

---

- WT 14** Promote the use rainwater and snowmelt as public and private resources, not a management impact.
- WT 14.1** Develop a pilot project that captures rainwater / snowmelt to irrigate City sport fields.
- WT 14.2** Encourage the development of plans to manage stormwater runoff as a resource to irrigate active recreational lands such as golf courses
- WT 14.3** Develop a strategy to plant demonstration Rain Gardens in City parks, gateway features and boulevards.
- WT 14.4** Work with the Region of Peel and Conservation Authorities to develop and implement a Homeowner Rainwater Capture Program, including the use of rain-barrels and Rain Gardens.

## Stormwater Management

Stormwater management involves integrated best practices from sediment and erosion control, to quantity and quality control facilities; to measures that can be implemented in front and rear yards, parking lots and along roads and pollution prevention. All of these efforts are intended to provide greater water management to protect both life and property from the hazards of stormwater and flooding, and to protect natural features that are reliant on clean surface and groundwater, particularly streams and wetlands that provide sensitive fish and wildlife habitat.

- WT 15** Develop a Stormwater Management Retrofit & Enhancement Study.
- WT 15.1** Develop a residential stormwater management utilities fee to help fund stormwater management retrofits and maintenance.
- WT 15.2** Work with the Province, Region of Peel and Conservation Authorities to implement Stormwater Management Retrofit & Enhancement Study.
- WT 16** Develop and implement a Stormwater Management Facility Maintenance Strategy.

- WT 17** Develop a Low Impact Development (LID) Strategy for the development of alternative City standards and practices that address stormwater management.
- WT 17.1** Develop and Implement planning policies and standards that require a “treatment train” approach to stormwater management for new development applications, including redevelopment and intensification.
- WT 17.2** Partner with Conservation Authorities to implement Low Impact Development (LID) Strategy, including monitoring.
- WT 17.3** Implement LID boulevard pilot projects in conjunction with the City’s Road Repaving Program.
- WT 18** Work with the Region of Peel and Conservation Authorities to develop and implement a Homeowner Rainwater Capture Program, including the use of rain-barrels and Rain Gardens.
- WT 19** Develop a Corporate Green Roof Strategy.
- WT 19.1** Establish guidelines that will require the City to consider the installation of a green roof for the reconstruction and/ or replacement of existing roofs at municipally-owned buildings and facilities.
- WT 19.2** Consider the establishment of standards for the installation of green roofs for all new municipally-owned building and facilities.
- WT 20** Develop / update Erosion and Sediment Control Bylaw (e.g. monitoring requirements, enforcement practices and resources).
- WT 21** Continue to implement and update the City’s Salt Management and Snow Management programs.

# Land

**Goal: Manage LAND to sustain the natural environment.**

## Why is this important?

Planning and designing cities involves allocating space for housing, transportation systems, industry, education, energy production, recreation, agriculture and natural heritage protection. Healthy natural heritage features and the urban forest provide a range of free ecological services (clean water, improved air quality, reduced energy needs etc) that sustain Brampton’s quality of life and the broader health of the built and natural environments.

Good urban design means planning communities to include a mixture of land uses, that are walkable and served by convenient transit service, contain a diversity of housing types, public spaces and recreational amenities and a healthy, diverse natural heritage system. Good urban planning can have a profound impact on improving air and water quality, reducing energy use, protecting natural heritage features and creating a sense of place.

Brampton’s land objectives and actions relate to conserving its natural heritage system and promoting ecological diversity and services, managing the impacts of development by focusing on good urban design and community sustainability including walkability, and increasing local food availability.

## Natural Heritage

Brampton’s Natural Heritage System (NHS) occupies 17% of the city’s land base and is a network of protected natural heritage features and waters within the Credit River, Etobicoke and Mimico Creeks, and Humber/West Humber River watersheds. Brampton’s natural heritage system provides habitat that supports a diverse range of native plants and animals while providing ecosystem services crucial to the well-being and quality of life enjoyed by Brampton residents. The success of a community’s natural landscape will be measured by its biological diversity and landscape health, as well as the environmental health of the City, including:

- Clean air and water
- Reduced energy use
- Recreation and education opportunities
- Flood protection and mitigation
- Erosion control
- Wildlife habitat and genetic diversity

**L 1** Collaborate with CVC to implement subwatershed recommendations through municipal and CA environmental education, restoration and stewardship programs, e.g. SNAP neighbourhood retrofits.

**L 1.1** Address natural heritage, open space, urban forest and green infrastructure regulatory, policy and program gaps.

**L 1.2** Develop a policy to restrict the selling of natural heritage features/lands from public ownership.

**L 2** Develop and implement a Natural Heritage and Environmental Management Strategy (NHEMS).

**L 2.1** Establish a Natural Heritage Network of internal and external partners to implement the recommendations of the Strategy.

**L 2.2** Establish a baseline and targets for ecological remediation, restoration and enhancement projects and a protocol to track and monitor progress.

**L 2.3** Develop a NHEMS Communication and Engagement Strategy, to education and motivate the City’s stakeholders, residents and businesses to participate in stewardship, restoration and enhancement activities on public and private lands.

**L 2.4** Establish a baseline and targets for natural heritage system biodiversity restoration and enhancement by hectare, and a protocol to track and monitor progress.

**L 2.5** Continue and maintain a Natural Areas Inventory project with the Conservation Authorities and the Region of Peel of the water, aquatic and terrestrial resources of the City’s natural areas, watercourses, lakes and ponds.

---

**L 3** Continue to participate in the Region's Greenland Securement Program.

**L 3.1** Develop and implement a Brampton-specific Greenland Securement Strategy, including funding for the acquisition and/or incentives for the donation of natural heritage lands.

**L 3.2** Implement the Landowner Securement Contact and Education Program to encourage private landowners of identified natural heritage areas to dedicate these lands into public ownership.

---

**L 4** Finalize Trails Hierarchy Strategy which includes trail design standards to minimize impacts to natural areas and buffers.

**L 4.1** Build on the Pathways Master Plan and complete the highest priority gaps in the network, including interregional connections.

**L 4.2** Review and update trail signage program.

**L 4.3** Develop Official Plan policies to address trail planning, design and construction to mitigate the impacts of trails and users on natural heritage features and functions.

---

**L 5** Work with Conservation Authorities, community associations, ICI sectors and School Boards to restore, expand and enhance natural heritage features and functions on their properties.

---

**L 6** Work with the Province, Region of Peel, Conservation Authorities and the Ontario Road Ecology Group to develop a city-wide Road Ecology Strategy.

**L 6.1** Develop Official Plan policies to require consideration of road ecology for new development and for municipal road reconstruction and expansion projects.

**L 6.2** Implement a long term Road Ecology Mitigation Strategy for Heart Lake Road including traffic management and road improvements, such as eco-passages, and environmental awareness, signage, etc.

---

## Naturalization

Brampton's pioneering heritage involved extensive clearing of forests (almost 90%) and wetlands to build settlements, facilitate agricultural and establish family farms across the flat Peel Plain. This legacy of land clearing combined with extensive (and fast-paced) development since the 1970's has resulted in the loss of natural areas, physical changes to valleys and watercourses, and fragmentation of Brampton's remaining natural vegetation communities that are now being affected by invasive species and extreme weather events.

The City's naturalization efforts are directed to addressing these historical conditions and current impacts by planting native and naturalized plant species, removing invasives species, constructing wetlands and establishing environmental buffers around natural heritage features. Naturalizing Brampton NHS will improve the ecosystem services provided to Brampton residents while maintaining native communities and species and conserving species of risk.

---

**L 7** Develop a Naturalization Communications Strategy to improve the community acceptance of naturalization programs on City lands.

**L 7.1** Require new developments to prepare Homeowner Guides and open space signage that promotes environmental awareness and education of NHS protection and naturalization.

**L 7.2** Develop and distribute communication materials to existing neighbourhoods that describes municipal and Conservation Authority naturalization efforts.

**L 7.3** Develop communication materials that identifies and promotes naturalization programs for private homeowners including the Conservation Authorities 'green yards' and the Region of Peel 'Fusion Landscaping'.

**L 7.4** Develop a signage program for areas that have been naturalized to educate residents of the benefits of naturalized landscapes.

**L 7.5** Develop native species planting lists and management factsheets in conjunction with the Conservation Authorities to direct planning applications and assist homeowners.

---

- 
- L 8** Expand the City's Valleyland Naturalization Program
    - L 8.1** Develop partnership opportunities with Conservation Authorities, Region of Peel, provincial ministries, and community groups to restore and enhance the City's natural heritage system.
    - L 8.2** Update the Naturalization Program to focus on improving natural vegetation communities including wetlands and wildlife habitat, and support invasive species management efforts.
    - L 8.3** Review and define the need for Natural Area Management Plans for public lands.
    - L 8.4** Provide support for the naturalization of the Claireville Conservation Area.
- 

- L 9** Develop and implement an Open Space Naturalization Program to prioritize areas to be naturalized in municipal open space, parks, boulevards, and areas of green infrastructure.
    - L 9.1** Undertake pilot projects in City boulevards and right-of-ways, parks and open spaces to demonstrate the benefits of naturalized landscapes.
    - L 9.2** Undertake wildflower / wild grass meadows pilot projects to reduce mowing in parks, open space and boulevards, and to naturalize municipal 'no mow' and 'no maintenance' buffers.
    - L 9.3** Update Planting Standards to promote native and/or naturalized species (trees, shrubs and groundcover); species diversity, size and age; and planting requirements including soil volumes.
    - L 9.4** Establish pollinator gardens across the City to educate residents of the value and biological imperative of conserving pollinator wildlife species.
    - L 9.5** Update Boulevard Maintenance, Grass and Weed Cutting, and Property Standards bylaws to ensure that they do not restrict naturalization efforts on public and private lands.
- 

- L 10** Develop an Invasive Species Management Strategy for all City properties.
    - L 10.1** Develop Official Plan and Secondary Plan policies to require new development applications to undertake invasive species management efforts.
- 

## Urban Forest

An Urban forest is defined as a collection of tree, shrubs and groundcover that grow within a city. Brampton's urban forest canopy covers 11% of its land area and provides ecological services that contribute to Brampton's quality of life, including climate change mitigation, improving local air quality, water quality control, energy conservation and recreational opportunities. Trees also increase urban property values and reduce noise impacts, and provide stormwater management and erosion protection for our lakes and streams. Extending from street trees to backyards and parks, forests and valleys, trees contribute to safe, walkable and beautiful communities that reduce our stress and create stronger community connections between people and the natural environment.

- 
- L 11** Develop Official Plan policies for new development to require mitigation and compensation for the loss of tableland vegetation to facilitate development.
    - L 11.1** Update Landscape Standards and guidelines to increase tree planting requirements for new residential, commercial, industrial and institutional sites.
    - L 11.2** Update Landscape Standards to increase tree planting requirements for City and Regional road projects.
    - L 11.3** Update Landscape Standards to increase soil quantity and quality for park and boulevard tree planting.
- 

- L 12** Implement the recommendations of the Brampton Urban Forest Study.
  - L 12.1** Review and update the Brampton Urban Forest Study every ten years, including the urban forest canopy assessment and recommendations for urban forest improvements.
  - L 12.2** Develop a range of tree canopy targets for the City.
  - L 12.3** Develop a Priority Planting Tool to assist municipal staff and community partners to identify planting sites to maximize urban forest benefits across the city.
  - L 12.4** Develop an Urban Forest Management Strategy.
  - L 12.5** Establish a baseline and monitoring protocol for the total of number of trees planted on City land per year.

- L 12.6** Establish a baseline and monitoring protocol for the total of number of trees planted city-wide per year.
- L 12.7** Undertake and maintain an inventory of all street and park trees.

---

**L 13** Implement the Emerald Ash Borer Management Program through annual funding and staff resources, and undertaking community plantings in parks and open spaces, etc.

---

**L 14** Implement the Peel Urban Forest Strategy and support the Peel Urban Forest Working Group.

---

**L 15** Support the Conservation Authorities 'Greening Corporate Grounds' and 'Partners in Project Green' programs.

- L 15.1** Work with Conservation Authorities to partner with community associations, ICI sectors and School Boards to plant trees on their properties, including greening parking lots.

---

**L 16** Work with Conservation Authorities to establish a Residential Tree Planting Program in Brampton.

- L 16.1** Develop an annual private tree planting program that includes discounted trees and planting advice for homeowners.
  - L 16.2** Develop a communication strategy to educate residents on the benefits of Brampton's urban forest and how they can assist in maintaining its health.
- 

## Sustainable Development

Brampton's urban environment comprises approximately 83% of the city's land area. Concerns over public health, climate change, energy and resource use has brought sustainable urban design to the forefront for those planning, building and managing communities in Ontario. Provincial legislation, plans and policies now direct municipalities to establish walkable, healthy, complete, sustainable communities.

---

**L 17** Implement the Sustainable Community Development Guidelines(SCDG) for new development, infill and intensification.

- L 17.1** Implement and maintain a tool to measure the sustainability of new development.
- L 17.2** Establish SCDG sustainability thresholds for minimum and aspirational scores site plan, draft plan and block plan applications.
- L 17.3** Revise Official Plan policies and Engineering and Landscape Standards to remove barriers to innovative sustainable development and community forms.
- L 17.4** Expand the City's Alternative Design Standards to include new development forms that encourage sustainable community development.
- L 17.5** Develop a protocol for monitoring the success of the SCDG program.
- L 17.6** Assess and identify incentives/financing necessary to support sustainable standards for the design and construction of new buildings or retrofits of existing buildings.

---

**L 18** Develop a comprehensive public education strategy about urban growth, design and density, including transit-oriented communities.

---

**L 19** Develop an Alternative Parking Strategy to encourage underground parking, tier parking structures, green parking lots and opportunities to reduce parking requirements in exchange for community benefits.

---

---

**L 20** Develop a vision and sustainable design framework for Urban Growth Centre.

**L 20.1** Partner with private landowners and developers to attract and accommodate growth along Corridors and in Mobility Hubs and Urban Growth Centre including public reinvestment and incentives.

---

**L 21** Monitor the success of Community Improvement Plan for the downtown core.

---

**L 22** Expand the Sustainable Neighbourhood Retrofit Action Plan (SNAP) program to existing neighbourhoods across the City in conjunction with CVC, TRCA and Peel.

**L 22.1** Implement the recommendations of the County Court SNAP through municipal operations and programs, and by leading and supporting community efforts.

**L 22.2** Establish an annual SNAP capital budget for program development and implementation.

---

**L 23** Work with senior government to reduce barriers for infill development on contaminated brownfield sites.

## Urban Agriculture and Local Food

Urban agriculture can be broadly defined as the practice of cultivating, processing, and distributing food in or around a community and can range from private and public horticulture, animal husbandry, aquaculture, agroforestry and urban beekeeping. Urban agriculture can reflect varying social and economic needs for more direct access to local, fresh vegetables, fruits, and meat products, and is considered an element of sustainable urban development that includes food security and food safety.

---

**L 24** Update the City's Community Garden policies and procedures.

**L 24.1** Identify spaces within the City's park inventory to expand the Community Garden Program

**L 24.2** Create a Community Garden Communication and Education Campaign.

**L 24.3** Assess opportunities to develop an Allotment Garden Program.

**L 24.4** Assess opportunities to use municipal green roof space for urban agriculture purposes.

---

**L 25** Develop policies to encourage private property community gardens in areas of high density, in collaboration with institutions, etc.

**L 25.1** Work with community organizations and residents to harvest backyard gardens, fruit trees, etc.

---

**L 26** Work with Peel and Conservation Authorities to develop a Food Strategy that includes urban agriculture, heritage agriculture, incentives for productive green roofs in new construction, neighbourhood farmers markets, etc.

**L 26.1** Support TRCA's Urban Agriculture initiative at the Claireville Conservation Area.

**L 26.2** Partner with Region of Peel and Local Food Banks to identify and address local food deserts.

---

# Energy

**Goal:** Reduce ENERGY consumption and manage the impact of energy usage on our environment

## Why is this important?

Energy powers our cities, our homes and our businesses. We use substantial amount of energy that is expensive to generate and has significant environmental impact to public and community health and natural systems, including air quality, water quality and thermal pollution.

Energy conservation and the use of renewable energy sources offer the greatest opportunity to establish a resilient energy system, and reduce greenhouse gas emissions to improve air quality. Brampton’s energy objectives and actions relate to managing the demand for energy, improving energy efficiency and performance, and increasing the use of renewable energy.

## Energy Management

Energy management covers a range of specialties including the efficient design and use of energy systems in buildings, facilities and transportation systems, measuring and monitoring energy use, and assessing and implementing the relative costs of energy conservation and energy production, including green energy in various applications.

**E 1** Develop Official Plan policies to explicitly promote urban development forms and buildings that support reduced energy consumption and the use of renewable energy.

**E 1.1** Develop policies and standards requiring new development applications to submit an Energy Conservation Plan that details proposed energy reduction targets, tactics and energy saving devices.

**E 2** Prepare a Feasibility Study for District Energy opportunities in Brampton’s Central Area.

**E 3** Develop a Comprehensive Energy Management Strategy for City buildings and facilities, including sports fields.

**E 3.1** Conform with the Green Energy Act requirements to track and report energy use.

**E 3.2** Develop policies and standards requiring LEED gold accreditation or equivalent energy accreditation for new and retrofitted corporate buildings and facilities over 500 square metres.

**E 3.3** Undertake energy audits and develop an Energy Conservation Plan for each municipal building and facility, including retrofits program.

**E 3.4** Develop a comprehensive corporate education program about energy consumption and reduction.

**E 4** Update the City’s Green Fleet Strategy.

**E 4.1** Continue right-sizing vehicles, and ‘greening’ the municipal fleet with new biodiesel products, hybrid and electric vehicles, etc.

**E 4.2** Implement city-wide electric vehicle plug-in stations for corporate and community uses.

**E 5** Work with PCCS partners to develop a Community Energy Plan.

**E 5.1** Work with local distribution companies (Enbridge and Hydro One Brampton) to develop a residential and ICI energy use data base that can be used to track community energy use.

**E 5.2** Work with local distribution companies (Enbridge and Hydro One Brampton) to revise utility bills to illustrate usage.

**E 5.3** Develop a city-wide Community Energy Map.

**E 5.4** Identify high-energy use communities and develop local action plans to reduce energy use.

**E 5.5** Develop a Residential Retrofit Program to assist homeowners with energy efficiency retrofits, including Local Improvement Charges.

**E 5.6** Develop a comprehensive education program about energy consumption and reduction.

**E 5.7** Explore partnership opportunities with renewable energy providers to provide information about private renewable energy options.

---

**E 6** Develop a Renewable Energy Strategy for City buildings and facilities.

**E 6.1** Identify opportunities for alternative and renewable power sources at City buildings and facilities.

**E 6.2** Investigate public/private partnership opportunities to integrate FIT applications onto City buildings and facilities.

**E 6.3** Identify opportunities to research and invest in green energy (e.g. Fuel Cell Demonstration Project and Green Energy Procurement).

---

# Waste

**Goal:** Reduce waste generation to limit resource use, greenhouse gas emissions, preserve habitats and resources and decrease management costs

## Why is this important?

Solid and organic waste in landfills takes up a significant amount of land, contributes to GHG emissions and poor air quality, and poses a risk to water resources as a result of landfill leachate. Waste reduction, recycling and reuse can help to preserve our resources, lessen pollution and decrease management costs.

Waste management is the responsibility of the Region of Peel, but the City of Brampton can do more to support and promote waste management within the community and through changes to corporate operations and land management. Engaging the community to understand the value of waste both as a resource and the onsite and municipal costs will bring awareness to waste strategies to rethink, reduce, reuse, recycle, repair and compost our organic and non-organic materials.

## Waste Reduction

Reducing waste at the source through corporate green procurement practices and the efficient use of resources is the first and foremost means of addressing the problem of waste generation.

- 
- WS 1** Develop a corporate Waste Management Strategy to implement and promote waste reduction, reuse, recycling and composting for all City facilities, buildings, parks and streets including organic materials from forestry operations.
    - WS 1.1** Undertake a corporate waste audit; and develop a corporate waste baseline, reduction targets and monitoring protocol.
    - WS 1.2** Develop a Waste Reduction Plan for each municipal building and facility, including targets and tracking/monitoring.
    - WS 1.3** Develop a comprehensive Corporate Education Program designed to encourage solid waste diversion.
    - WS 1.4** Develop a strategy to replace hard copy (written) materials for all municipal meetings, files, etc. through the use of electronic equipment (e.g. tablets) and digital filing systems, including document libraries.
    - WS 1.5** Establish standards for environmentally responsible printing.
    - WS 1.6** Develop Corporate procurement standards, practices and procedures to minimize waste generation for City operations, including service suppliers.

- WS 1.7** Develop policies and procedures to reduce packaging and/or require that it is returned to material suppliers.
- WS 1.8** Create a “no water bottle” policy for municipal buildings and facilities, and provide alternative water bottling filling.

- 
- WS 2** Work with Region of Peel and private businesses to develop a Recognition Program for businesses with exemplary practices for minimizing waste generation.
- 
- WS 3** Work with the Region of Peel to develop and implement a Community Waste Management Strategy for Brampton.
    - WS 3.1** Develop a Brampton-specific community waste generation baseline, reduction targets and monitoring protocol.
    - WS 3.2** Develop an education strategy for waste reduction, recycling, reuse and composting including the environmental and economic costs of waste disposal and the range of materials that can be recycled.
    - WS 3.3** Work with the School Boards to expand education on waste diversion i.e. reduction, reuse, recycle and composting through the City’s environmental school programs and at municipal buildings and facilities, including libraries.

## Recycling

Reducing waste is the first step in managing the impact on our built and natural environments. However, there are many items that we use in our everyday lives that can be recycled, such as aluminum, glass and paper, plastic and organic material. Recycling reduces the demand for virgin resources and improves air and water quality and reduces the need for landfills. In addition, recycling creates more economic activity in comparison to incineration and landfilling, and many recycling programs are self-sustaining as the products will help fund the curbside collection.

- 
- WS 4** Develop a corporate Recycling Strategy for city buildings, facilities, parks, streets and operations.
- WS 4.1** Undertake a corporate recycling audit, and develop a corporate recycling baseline, targets and monitoring protocol.
- WS 4.2** Develop a corporate Recycling Awareness Campaign.
- WS 4.3** Provide recycling bins in all city buildings, facilities, parks and streets.
- WS 4.4** Reuse and recycle City construction material.
- WS 4.5** Update minimum requirements for city standards for the use of recycled materials in municipal construction and road projects.
- 
- WS 5** Work with Peel to review and expand the range of recyclable materials for community collection.
- WS 5.1** Work with Peel to expand recycling collection services and organic waste program for multi-residential buildings, commercial, institutional and industrial uses.
- WS 5.2** Work with Peel to implement a recycling program for construction and demolition materials, in partnership with private sector.
- 
- WS 6** Work with Peel to develop “extended” producer responsibility programs.
- 

## Hazardous Waste

Hazardous wastes are primarily generated by industrial and manufacturing processes, and these wastes can be found in a broad range of products that are used in our homes, including but not limited to: biomedical wastes from home health care, photo-finishing chemicals, home and yard pesticides, motor oil, paints, unused cleaning products, electronics and discarded batteries. Hazardous wastes require special handling to reduce adverse effects to human health and the environment. The Province has identified requirements to manage hazardous wastes including collection, storage, transportation, treatment, recovery and disposal. Hazardous waste collection sites for residents are managed by the Region of Peel, although certain commercial and industrial businesses are assisting with the collection of electronics, batteries, etc.

- 
- WS 7** Develop Corporate Hazardous Waste Management Strategy to track, manage, collect and safely dispose of all toxic materials used within City of Brampton buildings, facilities and operations.
- WS 7.1** Develop a staff Education Program for working with Hazardous Material.
- WS 7.2** Develop a comprehensive database of optional non-hazardous substitutes for hazardous materials.
- WS 7.3** Develop a list of environmentally friendly cleaning suppliers and products to be used in all City facilities.
- 
- WS 8** Support the Region of Peel Hazardous Waste Management Strategy.
- WS 8.1** Work with Peel to identify the most commonly used hazardous products and recommend alternatives.
- WS 8.2** Work with Peel to handle all hazardous residential waste materials (e.g. batteries).
-

## 5 Sharing Environmental Performance

Reporting the City's environmental initiatives and progress to the community is a way to continually promote environmental awareness, share and celebrate successes and build strong community support for the EMP and its goals. Reporting on what is measured and monitored creates a dialogue between Council, municipal departments, and the public. Providing information that the community can easily access increases engagement, generates new ideas and instills ownership for Brampton's environmental future.

The City of Brampton has identified a range of tools that it will use to share its progress to the public. The primary communication tools to showcase the progress made through the EMP will be:

- 1. Canvas of Environmental Initiatives**
- 2. A bi-annual report to Council and**
- 3. A Sustainable Brampton Report.**

### Canvas of Environmental Initiatives

A key step in understanding the extent and nature of current environmental initiatives in the City of Brampton was the development of the Canvas of Environmental Initiatives. The Canvas provides a snapshot of the many studies, programs and activities that Brampton and its conservation partners (Peel, TRCA and CVC) are undertaking to improve the City's environmental performance. The initial Canvas was provided in the Background Report (2012) and has been updated for the Implementation Action Plan (2014). The Canvas is intended as a 'working list' and will be updated annually to reflect new environmentally sustainable initiatives as they are identified and implemented. The Canvas can be found at <http://www.brampton.ca/EN/Business/planning-development/projects-studies/Pages/Environmental-Master-Plan.aspx>.

It should be noted that the Canvas does not yet highlight the many green initiatives that are being undertaken by Brampton businesses, residents and / or environmental groups. The City will update the Canvas as these efforts are brought to our attention.

### Bi-Annual Council Report

The bi-annual report to Council will be focused on what actions from the EMP have been implemented over the preceding two years. This report will clearly and plainly describe what elements of the Grow Green Plan the City has implemented, and where and how the City will concentrate its efforts in the coming two year to move the Plan ahead.

## Sustainable Brampton Report

The Sustainable Brampton Report will not only include information that Brampton is collecting regarding EMP metrics and targets, but will also be a natural place to share long range data and monitoring provided by partners such as the Province (e.g. Transportation for Tomorrow), Region of Peel (e.g. Water Management Systems) and Conservation Authorities (e.g. Watershed Report Cards). This report will be available in a variety of languages and will clearly and plainly describe what elements of the Grow Green Plan the City has implemented, what progress is being made to achieve the targets, and where and how the City will concentrate its efforts in the coming years to move the Plan ahead. Over time, members of the community will know to look to the Sustainable Brampton Report to get the most comprehensive picture of Brampton's environmental progress.

The City encourages our residents, businesses, institutions and visitors to connect with our conservation partners to understand what is happening in and around the province, Region of Peel and within the CA watersheds that contributes to the health of Brampton's built and natural environments. The conservation agencies websites provide information regarding new and ongoing initiatives, including legislation and regulations, plans, policies and programs.

## 6 How the EMP will Evolve

---

Developing the Environmental Master Plan is a good first step, however the Plan needs to grow and change with Brampton as the city and its environmental priorities change. The Plan, like other City master plans, will be required to be updated every five years to ensure the document remains current, relevant and reflective of the city's changing environmental goals and areas of focus. While the EMP will always take a comprehensive approach to all elements of the environment, changing local or global conditions may impact how Brampton wants to position its environmental efforts. Environmental priorities like water or air may become more important if the region enters a time of extended drought, poor air quality or experiences an environmental disaster. The Grow Green Environmental Performance Framework has the flexibility to add additional indicators and metrics that may track different data and targets that become more relevant as priorities or environmental conditions shift.

The evolution of the EMP will be largely found in the Priority Indicators and related Actions which are expected to grow over time. As the City becomes more accustomed to measuring and tracking environmental data, it may add additional indicators and targets to its list of priorities and in turn, add or modify the actions identified to help reach those targets. The Environmental Master Plan reflects the best practices and ambitions for the City and community at this time of the Plan's creation, but provides flexibility for improvement, enhancement and change overtime to reflect the community it serves.

- 1 Action Table
- 2 Canvas of Initiatives
- 3 Consultation Summary

SUBSECTOR	ACTION ITEM	LEADS	PARTNER	TIMELINE				
				ONGOING	YEAR 1	YEAR 2-3	YEAR 4-5	YEAR 6-10

## People Invest in PEOPLE to create a healthy, livable and safe community.

Education and Awareness	<b>P 1</b> Develop a corporate Grow Green Engagement Strategy to promote the EMP goals of air, water, land, energy and waste.	SC	TBD						
	<b>P 1.1</b> Develop awareness and education materials for each component that includes a comprehensive website such as a data base of environmental resources, services, activities, calendar of events, etc.	S	TBD						
	<b>P 1.2</b> Develop a staff participation baseline and engagement tactics to increase staff participation (i.e. require staff participation in at least one environmental event per year).	TBD	RC TRCA CVC Peel						
	<b>P 1.3</b> Develop a Grow Green Recognition Program to celebrate the City's environmental leaders (staff, department) and programs.	TBD	SC						
	<b>P 1.4</b> Utilize technology and establish smart approaches to access and share environmental data, information and successes between City departments.	IT	TBD						
	<b>P 2</b> Develop a Community Grow Green Campaign to promote the EMP framework and actions and to celebrate successes.	SC	TBD						
	<b>P 2.1</b> Inform Council and the community of the implementation and success of Brampton Grow Green through a variety of communication materials, e.g. annual updates, reports to Council and 'state of the environment' reports.	TBD	PB						
	<b>P 2.2</b> Develop an annual Grow Green city-wide event.	RC	TBD						
<b>P 2.3</b> Develop a Grow Green Recognition Program to celebrate the City's environmental leaders including conservation partners, residents, businesses, NGOs, etc.	TBD	SC							

TBD - TO BE DETERMINED

CITY: EBS - ENFORCEMENT AND BYLAW SERVICES, EDS - ENGINEERING AND DEVELOPMENT SERVICES, EDT - ECONOMIC DEVELOPMENT AND TOURISM, FS - FACILITY SERVICES, FES - FIRE AND EMERGENCY SERVICES, HR - HUMAN RESOURCES, IT - INFORMATION TECHNOLOGY, MO - MAINTENANCE AND OPERATIONS, OCE - OFFICE OF COMMUNITY ENGAGEMENT, PB - PLANNING AND BUILDING, RC - RECREATION AND CULTURE, SC - STRATEGIC COMMUNICATION, T - TRANSIT

PARTNERS: BILD - BUILDING INDUSTRY AND LAND DEVELOPMENT ASSOC., CA - CONSERVATION AUTHORITIES, CVC - CREDIT VALLEY CONSERVATION, EG - ENBRIDGE GAS, HOB - HYDRO ONE BRAMPTON, PEEL - REGION OF PEEL, PCCS - PEEL CLIMATE CHANGE STRATEGY PARTNERSHIP, SMBC - SMART COMMUTE BRAMPTON-CALÉDON, TRCA - TORONTO AND REGION CONSERVATION AUTHORITY

				ONGOING	YEAR 1	YEAR 2-3	YEAR 4-5	YEAR 6-10
	<b>P 3</b> Develop a Community Grow Green Awareness and Engagement Strategy.	OCE	TBD					
	<b>P 3.1</b> Develop a series of awareness and education campaigns (graphic information brochures) for each of the EMP core components.	OCE	TBD					
	<b>P 3.2</b> Develop and maintain a community participation baseline and database.	OCE	TBD					
	<b>P 3.3</b> Develop and maintain an inventory of Community Environmental Programs.	OCE	TBD					
	<b>P 3.4</b> Develop a comprehensive website that includes a database of environmental resources, services, activities and events.	OCE	IT					
	<b>P 3.5</b> Continue to expand Brampton's Environmental Education Program to support the needs of a wide range of learners in a community-based agenda.	RC	TBD					
<b>Expand Partnerships</b>	<b>P 4</b> Develop and implement a community Grow Green Partnership Strategy	TBD	RC MO					
	<b>P 4.1</b> Support school boards (Peel District, Dufferin-Peel Catholic District, Brampton Private, Alternative and Independent boards) to implement and complete the Ontario Eco Schools Certification Program.	RC	School Boards					
	<b>P 4.2</b> Establish a Grow Green Network and events for environmental NGO's and community groups, businesses and faith groups.	OCE	TBD					
	<b>P 4.3</b> Establish a database of priority community Grow Green projects that is accessible by community Grow Green Network.	TBD	MO PB					
	<b>P 4.4</b> Establish and maintain a green business database.	EDT	OCE					

TBD – TO BE DETERMINED

## Water

Protect and respect WATER as a non-renewable, life critical resource.

Potable Water Conservation	<b>WT 1</b> Develop Official Plan policies to promote urban development forms and buildings that support reduced water consumption.	PB								
	<b>WT 1.1</b> Develop policies and standards requiring new development applications to submit a Water Conservation Plan that details proposed water reduction targets, tactics and water saving devices.	PB								
	<b>WT 2</b> Work with Region of Peel to review communications material to draw attention to the value of water and its conservation.	TBD	Peel							
	<b>WT 2.1</b> Work with Peel to develop Brampton specific potable water use baseline and reduction targets.	TBD	Peel							
	<b>WT 3</b> Work with Region of Peel to expand current education about potable water demand and use including the impact of water use on watershed resources, cost of treating and distributing water, current lawn watering regulations and the use of potable water for swimming pools, etc.	OCE	Peel							
	<b>WT 3.1</b> Develop and distribute public information on water efficiency.	TBD	Peel							
	<b>WT 3.3</b> Support the Region's Fusion Landscaping Program to encourage the planting of native species to reduce watering requirements for residents and ICI.	MO	Peel							

TBD – TO BE DETERMINED

SUBSECTOR	ACTION ITEM	LEADS	PARTNER	TIMELINE				
				ONGOING	YEAR 1	YEAR 2-3	YEAR 4-5	YEAR 6-10
	<b>WT 4</b> Work with Region of Peel and Conservation Authorities to promote the Region's ICI Indoor Water Efficiency Program to educate and assist ICI customers on how to reduce their consumption.	OCE	Peel CVC TRCA					
	<b>WT 5</b> Support Peel to systematically reduce leakage in the water distribution systems.	EDS	Peel					
	<b>WT 6</b> Work with Peel Climate Change Strategy (PCCS) partners to develop an Infrastructure Risk Management Assessment and Renewal Strategy to address climate change adaptation.	EDS	Peel					
	<b>WT 7</b> Develop a Low Impact Development (LID) Strategy, standards and practices that address stormwater management with consideration for snow melt/rainfall resource use, and property irrigation.	FS	RC					
	<b>WT 7.1</b> Develop a plan to install water conserving technology and/or retrofit low-flow fixtures in new and existing City facilities.	FS	T, RC, FES, MO					
	<b>WT 7.2</b> Pilot grey water systems in municipal buildings and facilities (e.g. composting toilets; on-site treatment in public buildings).	FS	T, RC, FES, MO					
	<b>WT 7.3</b> Implement wastewater demonstration projects in municipal buildings and facilities (e.g. LID, greywater recycling, green roofs).	FS	T, RC, FES, MO					

TBD – TO BE DETERMINED

# Canvas of Environmental Initiatives

The Canvas of Environmental Initiatives is a snapshot of the many ways in which Brampton and its conservation partners are improving the City's environmental performance today. Over 250 initiatives are listed according to their relative relationship to the Six Core Components, Brampton Environmental Master Plan. Given the inter-related nature of many of these initiatives, some may relate to more than one of the core components. The canvas includes initiatives that are currently being spearheaded by

## PEOPLE

### Strategic Priorities and Direction

### Partner Acronyms:

BEPAC – Brampton Environmental Planning Advisory Committee

BCC – Brampton Clean City

COB – City of Brampton

CVC – Credit Valley Conservation

TRCA – Toronto and Region Conservation

ROP – Region of Peel

# Consultation Summary

The Green Paper described consultation events from 2009 through 2012. The following consultation events contributed to the development of the EMP Implementation Action Plan.

## City-Wide Strategic Plan Consultation 2013

Using surveys, stakeholder workshops and town hall meetings over the course of early 2013, the City consulted residents, businesses and community stakeholders of Brampton on the Strategic Plan. One outcome of the consultation was the feeling that City Hall can do a better job of setting an environmentally-friendly example for residents to follow. In addition, the most consistent message around the Environmental Stewardship pillar was to protect and connect more of Brampton's green space.

## EMP workshop, June 2013

As part of the strategic plan consultation process, a diverse group of attendees from the City of Brampton, City of Mississauga, Region of Peel, Credit Valley Conservation, members of the public and non-profit environmental organizations were brought together to review the role of the EMP within the Strategic Plan, and discuss the indicators and metrics that were selected to monitor each of the Core Components.

## Implementation Action Plan Steering Committee and Technical Advisory Committee Workshop, April 2014

Held on April 3, 2014, this workshop included a range of attendees from various City departments and the Region of Peel and Credit Valley Conservation to review the proposed actions to make environmental progress towards the goals of the IAP, and provide input as to who would be the ideal leader or partner to spearhead a specific action.
