

## **Mt Pleasant SP Panel Information**

### *Archaeology*

The purpose of the Archaeology Section of the Heritage Component Study of the Mount Pleasant Secondary Plan is to assemble any information currently available which documents archaeological resources within the study area. In addition, the possibility that additional archaeological sites could be found within the area is also considered.

Recommendations are made with respect to additional archaeological research that may be necessary for already known sites and for areas of the Mount Pleasant Secondary Plan where it is determined that additional sites may be found. The objective is to ensure that all archaeological sites are documented and preserved if possible.

### *Built Heritage and Cultural Heritage Landscapes*

The purpose of this study is to identify built heritage resources and cultural heritage landscapes in the plan area, provide background and contextual material for the assessment of these resources, and to inform and direct sound heritage planning on the lands within the City of Brampton.

Based on further assessment and historical research of these resources, individual properties were identified as candidates for more specific analysis by means of Heritage Assessment Reports or Heritage Impact Assessments [HIA].
